Honeywell Publications Catalog

Honeywell Publications Catalog

NOVEMBER 1980

Preface

This catalog supersedes Honeywell Publications Catalog, Order No. AB81, Rev. 10, dated February 1980, and its Addenda A, B, and C.

This catalog contains four separate index sections:

Section 1 lists all Honeywell publications sequenced alphanumerically by keywords in titles.

Section 2 lists Honeywell publications according to the product line supported, e.g., Series 60, Series 2000, 600, 6000, System 700, Data Entry. Within each product line, titles are listed by mast-head — hardware, software, and applications. Software and applications documents are further subdivided into their different types.

Section 3 lists all Honeywell publications, as well as those Xerox publications available through Honeywell, alphabetically by order number.

Section 4 consists of data processing and Page Printing System forms, including illustrations.

In Sections 1, 2 and 3, the listings indicate the publication's title, order number, revision number, and function. Sections 2 and 3 indicate the current prices. Documents which have REF. (reference) in the "Function" column are technical manuals; the INST (instructional) category covers education material, such as programmed instruction texts, study guides, and classroom workbooks. The information in the other columns should be self-explanatory.

Section 4 lists forms alphabetically by title and shows forms in numerical sequence by form number.

The prices and policies shown are effective as of November 1980 and are subject to change without notice. Publications can also be withdrawn from distribution without notice if the information they contain becomes obsolete or if usage no longer justifies maintaining an inventory.

General Information

ORDERING PROCEDURES

It is Honeywell's desire to provide our customers with the fastest and most efficient method of ordering and receiving publications. With this goal in mind, a specially designed, standardized order entry form is included at the back of this catalog. Space is provided for such information as "ship to" and "bill to" addresses, purchase order number, item number, and order quantity. If your company procedures require a purchase order, attach one to the standard order form.

Send your orders to:

Honeywell Information Systems Inc.
47 Harvard Street, MS 01
Westwood, MA 02090
Attn: Publications Services

You can use this same address to request any other information, such as prices or shipping information, or similar data.

Payment for all orders must include the catalog amount, plus 4% for shipping and handling charges; plus any applicable state, county, or city taxes. Include a check, purchase order or reference to a purchase order or a letter authorizing us to bill you. Orders for less than \$25.00 must be prepaid by check or money order and should include 4% for shipping and handling charges, as well as any applicable state, county, or city taxes. Requests for publications received without the necessary billing authorization will be needlessly delayed.

INVOICES

Invoices for all orders are issued approximately 2 weeks after shipment. Please note that our remittance address is printed on the top of each invoice.

HOTLINE SERVICE

We also provide you a HOTLINE service to fill requirements for orders you need "yesterday."

Call (617) 392-5235

Please try to provide us with a purchase order number when you call, and confirm all telephone orders with a written purchase order or letter annotated "This confirms my telephone order of . . ."

DISCOUNTS

Discounts are now available (1) on a per-item quantity basis and (2) on the total dollar value of individual purchase orders.

- 1) Individual titles ordered in quantities of 50 – 99 each receive a 10% discount. Titles ordered in quantities of 100 or more each receive a 20% discount.
- 2) Individual purchase orders with a total dollar value of \$2,000 – \$3,999 receive a 10% discount. Orders for \$4,000 or more receive a 20% discount.

Purchase orders can qualify for only one discount: individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights.

DELIVERY

Your rush orders will be shipped immediately upon our receipt of the order; regular orders will be within one week. Accompanying the shipment will be a packing slip indicating items shipped — including quantity and dollar value, backordered items, and items that do not exist on our files. (The latter category might contain items that had an incorrect order number or may in fact be obsolete.) It is not necessary to reorder an item on backorder. Backordered items are automatically shipped to you upon their receipt in our warehouse.

RETURNS

Because we frequently update our publications, we cannot credit full original price on publications returned to us more than 60 days after shipment. Material returned within 60 days will be credited in full if publications being returned are at the latest revision and are in "like new" condition. Requests for returns must be submitted in writing in advance and should include Order No., title, and revision number of subject documentation and reason for request. Please reference original purchase order number on all correspondence.

REPRINT POLICY

Honeywell will authorize the reproduction of publications by others. The royalty for reprint rights will be charged at a cost equal to 1/3 the published selling price of the particular publication times the number of copies to be reprinted. Discounts will be allowed per the following guidelines:

Royalty Fee	Discount*
\$ 5,000 — 9,999	5%
\$10,000 — 19,999	10%
\$20,000 — 29,999	15%
\$30,000 — +	20%

Your request for reprint rights should be directed to:

Manager, Publications Services
Honeywell Informations Systems Inc.
47 Harvard Street, MS 01
Westwood, MA 02090
(617) 392-5208

Requests for reprints should include the following information:

1. Item(s) to be reprinted (include order number, title, and revision)
2. Quantity to be printed on each item
3. Reason for requesting reprint

When granted, reprint rights will be effective for one year only. Subsequent requests will be treated separately and not added to the original request.

***NOTE: NON-PROFIT EDUCATIONAL INSTITUTIONS MAY BE ELIGIBLE FOR ADDITIONAL DISCOUNTS. PLEASE CONTACT PUBLICATIONS SERVICES FOR FURTHER DETAILS.**

NOTE TO HARDWARE CUSTOMERS**

It is Honeywell's policy to provide each new customer, excluding mini systems (Level 6), with an initial supply of publications. This initial supply will consist of 1 each of the required publications and can be equal in value up to five percent (5%) of one month's rental value of the particular equipment ordered to a maximum of \$1,000. The value of such initial supply of publications will be determined by the price schedule in the Publications Price Catalog. Requests for publications to be included as part of this initial allotment must be submitted by the Honeywell marketing representative handling your account. You cannot order these publications directly. It is the responsibility of the branch office to monitor each customer's initial allotment and to determine when the customer has received the number of publications to which he is entitled.

**Please contact your Honeywell Marketing Representative for further details.

In addition, you will automatically be provided with revisions and/or addenda to publications pertaining to your system. New publications must be ordered by your Honeywell Marketing Representative.

If problems regarding the receipt of these publications occur, please contact: Manager, Publications Services, Honeywell Information Systems Inc., 47 Harvard Street, Westwood, MA 02090.

NEW ORDER NUMBERS FOR SOFTWARE MANUALS

Check this catalog for the availability of previous revisions and if they are listed as available then use the format shown below.

In order to provide greater flexibility in the support of previous software releases, a modified numbering system is being introduced for software manuals. The new numbering system (format shown below) permits ordering software documents for a supported release that is earlier than the current release.

The new format is:

XXXX-RR (manual)
XXXX-RRA (addendum)

Where:

XXXX is the base Publication Order Number (e.g., CB05)
RR is the revision level (e.g., 01 = Revision 1)
A is the alphabetic designation of the addendum, if any

For Example:

CB05, Revision 1 would be expressed in the new format as CB05-01.
CB05A, Revision 1 would be expressed in the new format as CB05-01A.

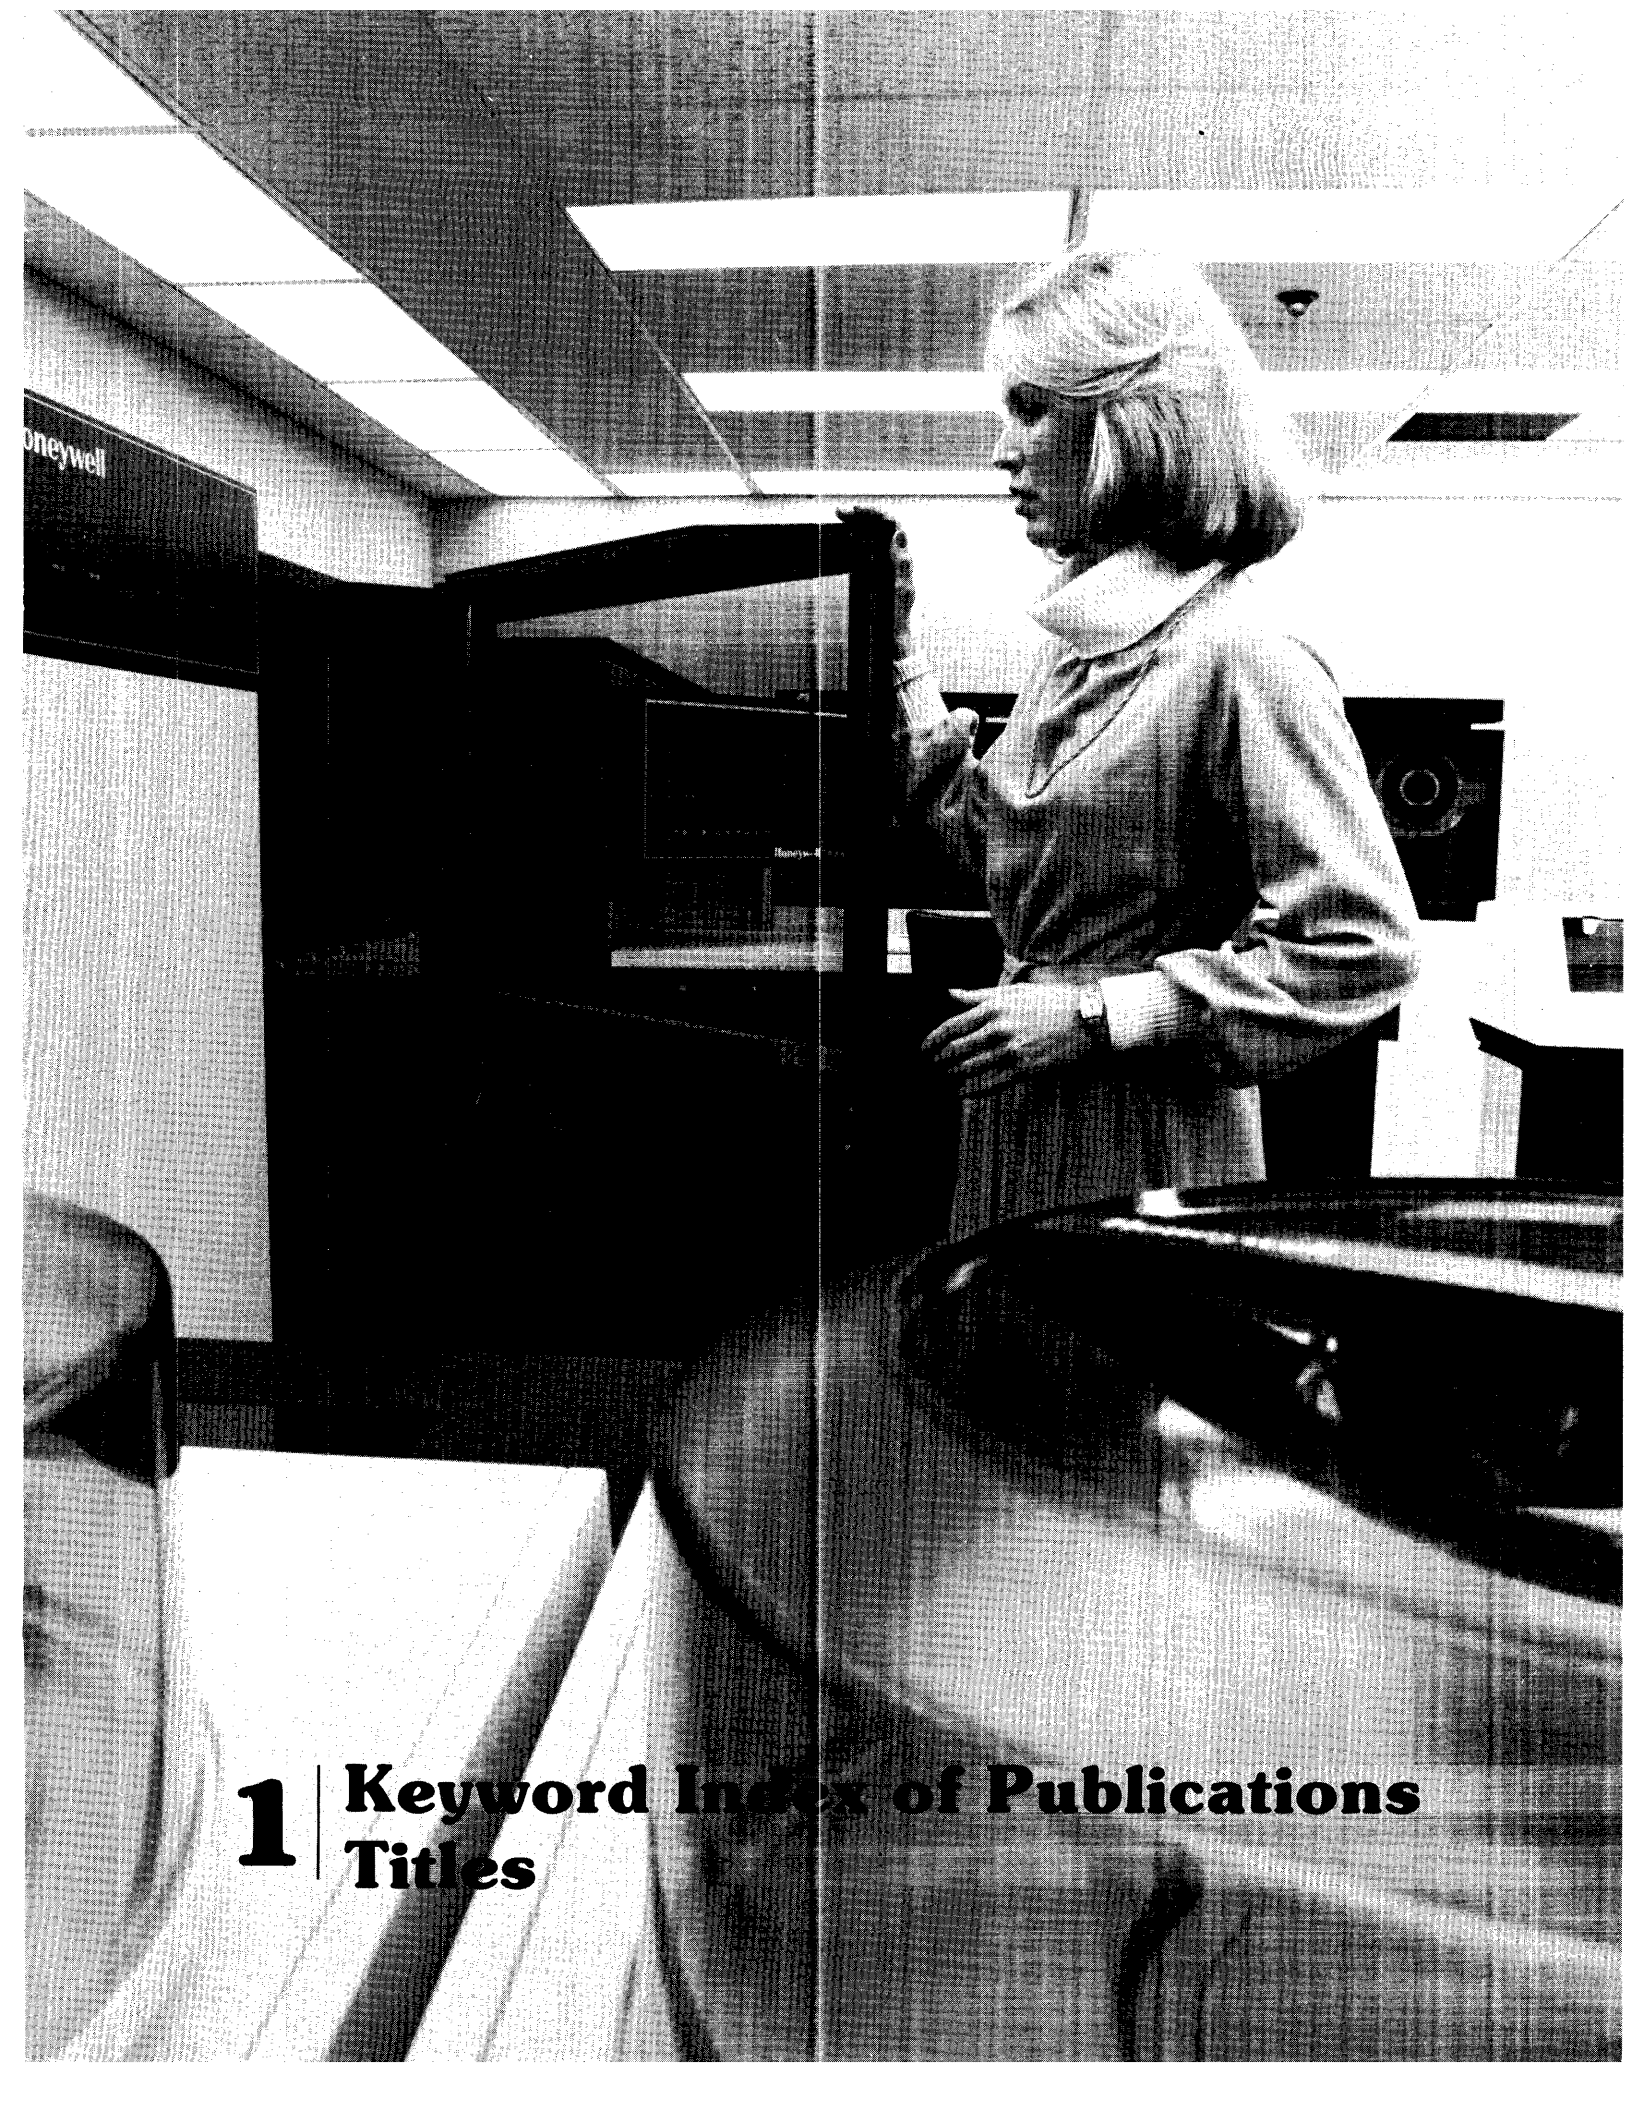

If you order a publication using only the base Publication Order Number, then you will receive the latest revision in stock. If you want an earlier version, then you must use this new format order number. Make sure that you specify the correct revision number if you want documentation supporting a specific software release.

For software manuals, when ordering the latest revision use only the base number of the publication. Do not specify the revision. (i.e., CB05 rather than CB05-03) Only when ordering out-dated software should the revision be specified.

For hardware manuals, do not specify the revision since only the latest revision are retained in stock.

 Page Width & Length _____

DESIGN CONSIDERATIONS

- The scales at the top and bottom of the form are identical. They show the four page widths available on the Page Printing System: 5.5, 7.5, 8.5, and 11.0 inches. The flags associated with each width point to the last character position that can be used for variable data (position 63, 88, 101, and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 50, 70, 80, and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.720 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.220 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.275 inch left margin); glue binding requires no extra space. A 0.625 inch left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.275 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM**, whatever the reason for omitting data from available spaces. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 2.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 82). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (corner type and area outline, line number, etc.). All rules, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs at the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margin).
- Allow one character space for vertical and horizontal rules. (No space is required for horizontal rules when a spacing of four lines to the inch is used.) Rule sizes permitted are as follows:

R-0	R-1	R-2
BR-0	BR-1	BR-2
- Draw fold marks in black; use blue to indicate their distance in inches from the edge of the page.
- If the present design is to be registered with another design, attach a sample of the latter and enter the following information:
 Registration Form
 (Application Name and/or Form No.)
- If the present design replaces an existing design, enter the following information:
 Honeywell Serial No. of Design Being Replaced
 Status of Cylinder Being Replaced

DESIGN CONSIDERATIONS

Ref: Honeywell Format Cylinder Design Guide - AN 39 Rev. 2

- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flag associated with each width points to the last character position that can be used for variable data (position 101 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.220 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.220 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.625 inch margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM**, whatever the reason for omitting data from available spaces. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flag associated with each length points to the last horizontal line position that can be used for variable data (from position 10 to position 83). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (screen type and area outline, font number, etc.); All rules, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margin).
- Where possible, locate vertical format lines in the center of a character column (left blank) and horizontal format lines in the center of a line (left blank). When necessary format lines may be drawn between characters or lines of variable data however it is likely some interference may occur; the degree of interference can be minimized by using 90 rule size.

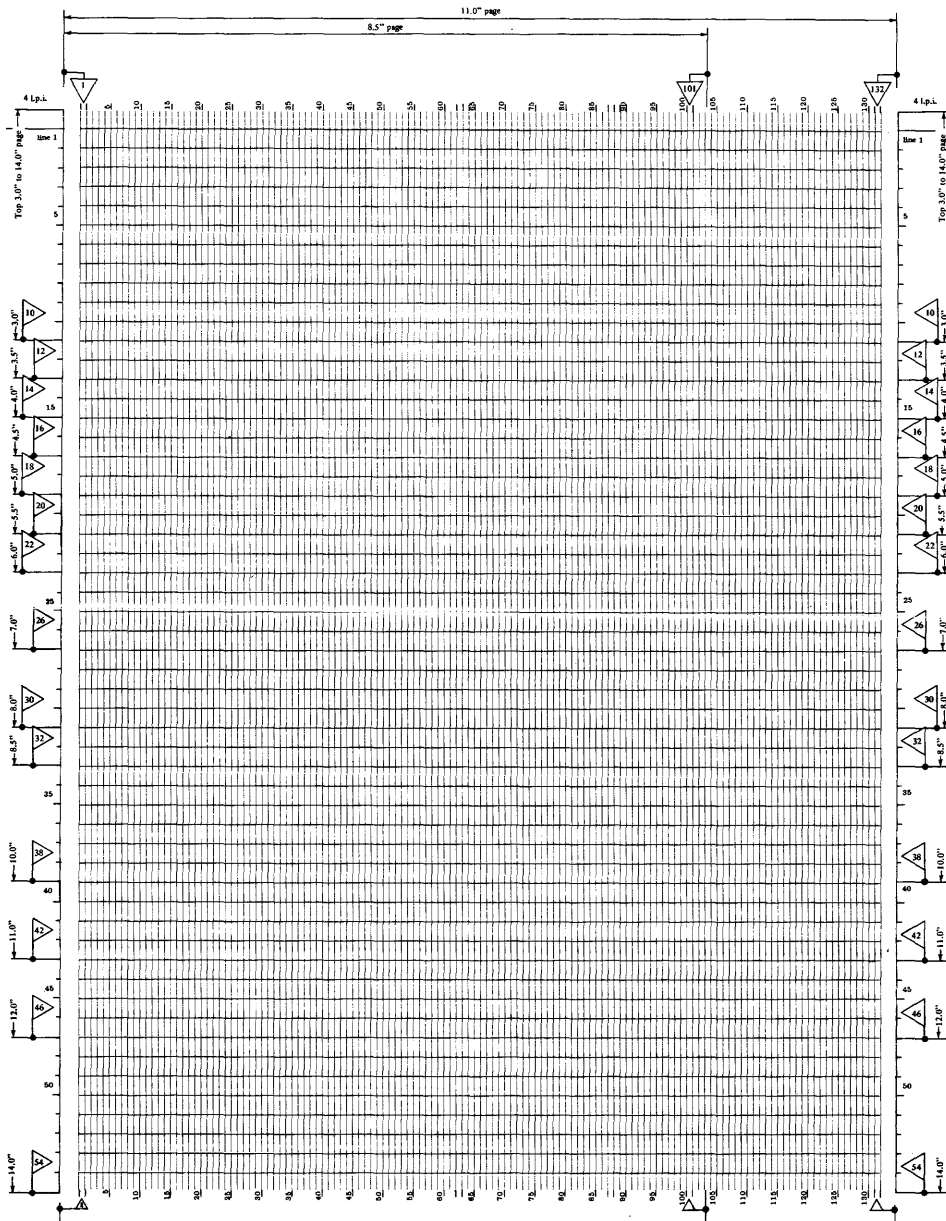

- Draw fold marks in black; use blue to indicate their distance in inches from the edge of the page.
- If the present design is to be registered with another design, attach a sample of the latter and enter the following information:

Registration Form.
 (Application Name and/or Form No.)

- If the present design replaces an existing design, enter the following information:

Honeywell Serial No. of Design Being Replaced _____
 Status of Cylinder Being Replaced _____

NOTE: The spacings on this form may vary due to atmospheric changes. To insure accuracy, use grid measurements as printed.

- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625-inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.625 left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM**, whatever the reason for omitting data from available space. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 93). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data. Blue for directions (screen type and area outline, font number, etc.). All rules, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margins).
- Allow one character space for vertical and horizontal rules. (No space is required for horizontal rules when a spacing of four lines to the inch is used.) Rule uses permitted are as follows:

- Draw fold marks in black, use blue to indicate their distance in inches from the edge of the page.
- If the present design is to be registered with another design, attach a sample of the latter and enter the following information:

DESIGN CONSIDERATIONS

- Ref: Honeywell Format Cylinder Design Guide # AN 36 Rev. 2
- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flag associated with each width points to the last character position that can be used for variable data (position 101 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 100 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.200 inch from the edge of the page, that for format data is 0.125 inch.
 - The flag labelled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.200 inch for variable data and 0.125 inch for format data.
 - Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.625 left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
 - DO NOT REDESIGN THIS FORM**, whatever the reason for omitting data from available spaces. Re numbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
 - The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flag associated with each length points to the last horizontal line position that can be used for variable data (from position 10 to position 50). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
 - The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
 - Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
 - Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (arrow type and area outline, form number, etc.). All rules, letters, and designs drawn in black will be in the final design.
 - Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
 - Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margins).
 - Where possible, locate vertical format lines in the center of a character column; left blank and horizontal format lines in the center of a line left blank. When necessary format lines may be drawn between characters or lines of variable data however: it is likely some interference may occur; the degree of interference can be minimized by using FO rule size.

DESIGN CONSIDERATIONS

Ref. Honeywell Format Cylinder Design Guide #AN 39 Rev. 2

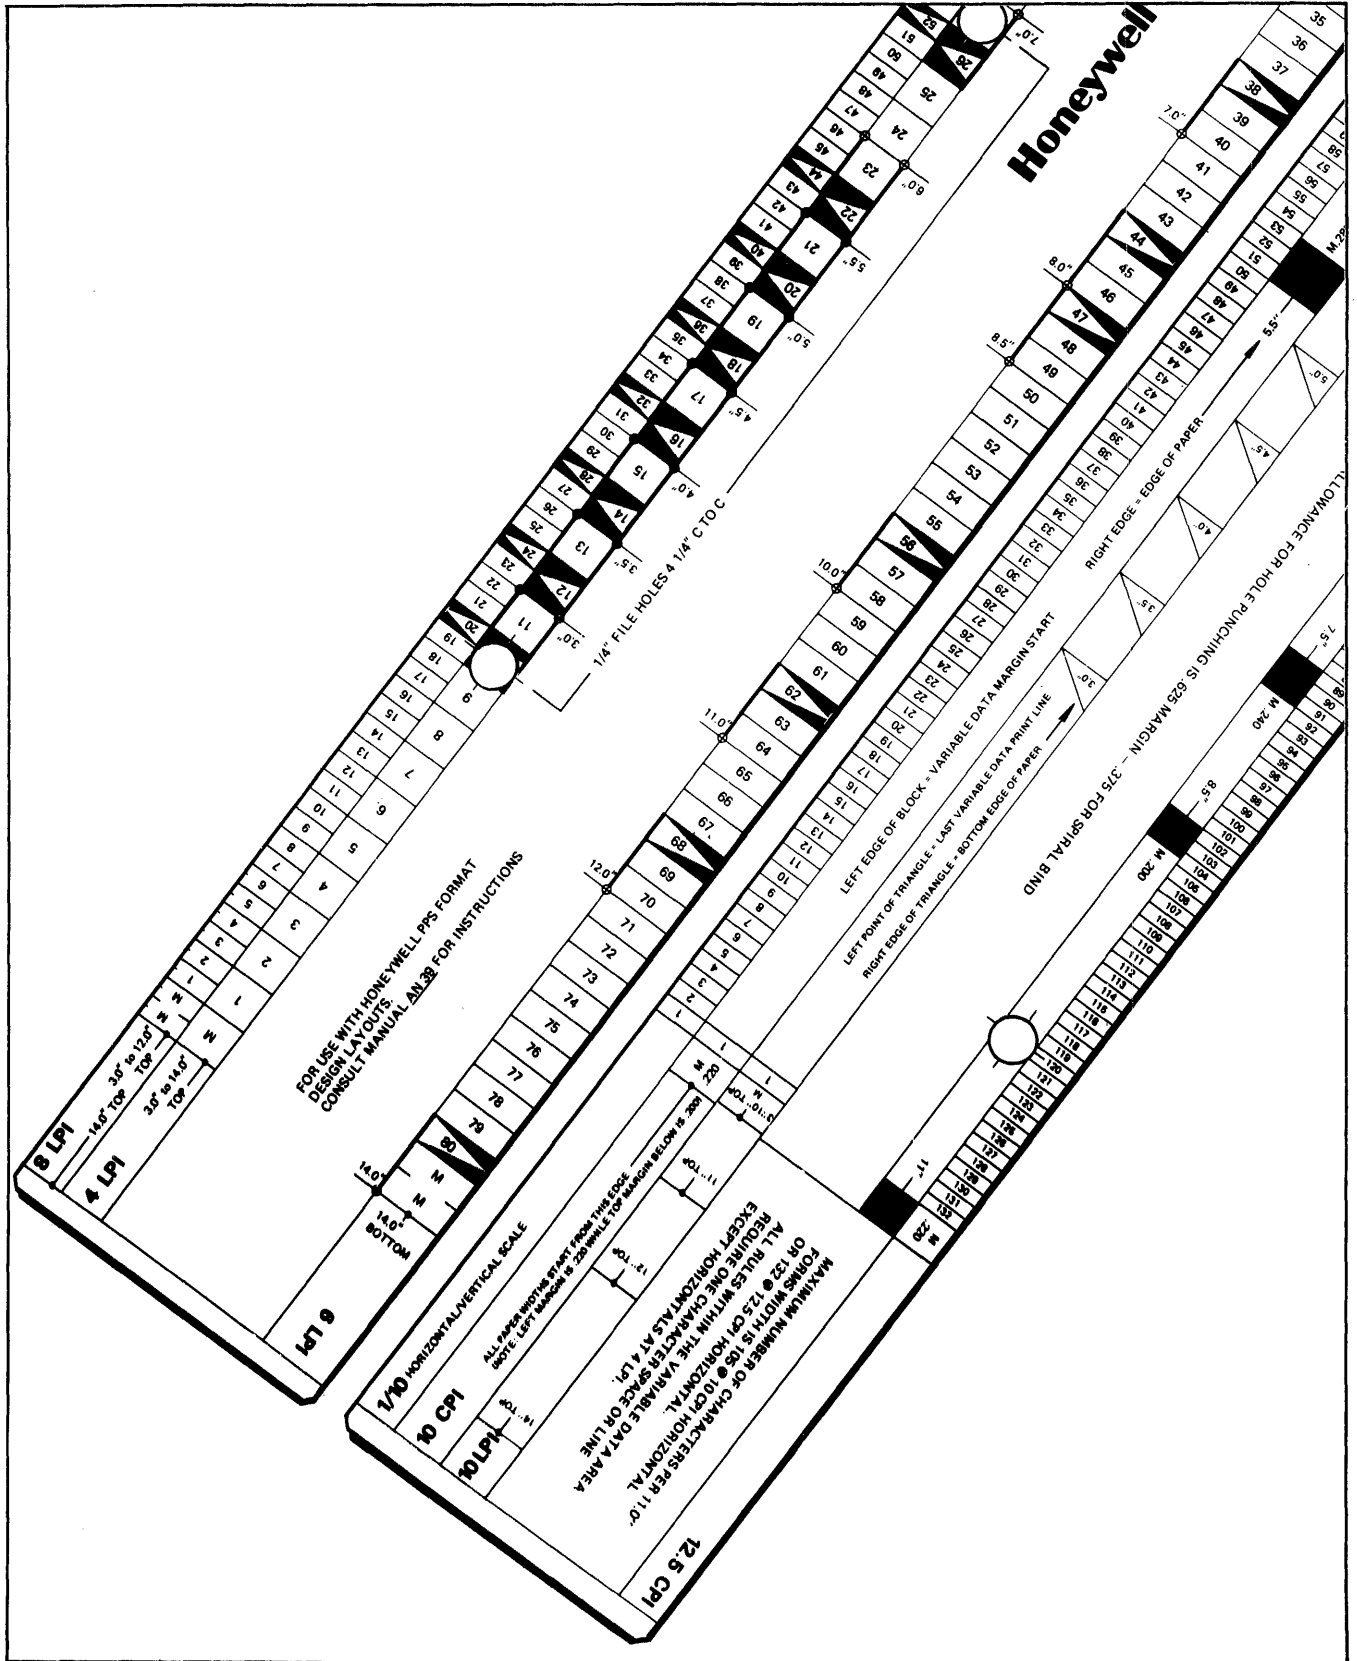

- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flags associated with each width point to the last character position that can be used for variable data (position 101 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.620 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the last character print position available for variable data. The minimum left margin, constant for all forms, is 0.220 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.375 inch left margin); glass bonding requires no extra space. A 0.625 inch margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10 characters per inch. A 0.275 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT REMEMBER THIS FORM**, whatever the reason for omitting data from available spaces. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 93). The number of line positions available is directly related to the number of lines per inch selected (4, 5, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (screen type and area outline, line number, etc.). All rules, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the left and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margin).
- Where possible, locate vertical format lines in the center of a character column; left blank and horizontal format lines in the center of a line left blank. When necessary format lines may be drawn between characters or lines of variable data; however if it is likely some interference may occur, the degree of interference can be minimized by using PRO rule size.

HONEYWELL PUBLICATIONS CATALOG ADDENDUM A

SUBJECT

Additions and Changes to the Manual

SPECIAL INSTRUCTIONS

This is the first addendum to the Honeywell Publications Catalog, Order No. AB81-11, dated November 1980. It is a listing of all publications available through January 23, 1981.

This addendum supersedes all of Section 3 and page 1 of Section 4 of AB81-11 and should be used when pricing publications.

All prices in the November Edition of the Publications Catalog should be disregarded.

HONEYWELL PUBLICATIONS CATALOG ADDENDUM B

SUBJECT

Additions and Changes to the Manual

SPECIAL INSTRUCTIONS

This is the second addendum to the *Honeywell Publications Catalog*, Order No. AB81-13 dated May 1982, and supersedes Addendum A dated June 1982. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with "B" preceding the order number are new listings.

HONEYWELL PUBLICATIONS CATALOG ADDENDUM C

SUBJECT

Additions and Changes to the Manual

SPECIAL INSTRUCTIONS

This is the third addendum to the *Honeywell Publications Catalog*, Order No. AB81-13 dated May 1982, and supersedes all previous addenda. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with C preceding the order number are new listings.

ORDER NUMBER

AB81-13C

August 1982

Honeywell disclaims the implied warranties of merchantability and fitness for a particular purpose and makes no express warranties except as may be stated in its written agreement with and for its customer.

In no event is Honeywell liable to anyone for any indirect, special or consequential damages. The information and specifications in this document are subject to change without notice.
