FTRUNC(c)   FTRUNC(c)

NAME

ftrunc − truncate file to given size

SYNOPSIS

ftrunc = 26.

ARGUMENTS (input)

capability associated with file
0 - high-order word of new size
1 - low-order word of new size

VALUES (returned)

1 - high order word of 32-bit size
2 - low order word of 32-bit size

DESCRIPTION

The file specified by the capability is truncated to the size (in bytes) given as an argument in the message. The size of the file is returned as a two-word value.

SEE ALSO

fsize(c).
