SPECIFICATION

1. Monitor Descriptions

This CRT display monitor is operates in a separate drive mode input and is compatible with IBM PS/2.

2. Display Monitor Electrical Characteristics

- AC power input

- * Power supply :

- 1) 110-120VAC 60HZ - USA version
- 2) 220VAC 50HZ - Europe version

- * Power consumption :

- 1) AC 0.6A MAX-USA version
- 2) AC 0.4A MAX-Europe version

- Video

- * Input : 0.7Vp-p Separate ANALOG signal.

- * Band width : 30 MHZ at-3dB

- * Video gain : 20 Vp-p min.

- Synchronous

- * Type : Separate, TTL level,3-Mode

- * Input synchronizing signals :

	Mode 1	Mode 2	Mode 3
Horizontal 1) Frequency(kHz) 2) Polarity	31.47 +	31.47 -	31.47 -
Vertical 1) Frequency 2) Polarity	70.08 -	70.08 +	59.95 -
Resolution(H X V)	720x 350	720x 400	640x 480

- Recommendable display area

MODEL	Width[MM]	Height[MM]	Remark
ML2671	207±3	155±3	
ML4671	230±3	170±3	

- Cathode ray tube specification

MODEL	CRT size	Face radius	Remark
ML2671	12"	1200mm	
ML4671	14"	1524mm	

- * Deflection angle : 90°

- * Implosion protection : Shrinkage band with mounting lug.

- * Phosphor : WD(paper white)

- * Face : Direct etched

- High voltage

- * Anode voltage : 12 KV±0.5KV at 1K= 0 uA

- * Voltage regulation : 300V max.(1K = 0 to 40uA)

- Tilt : ±1° max.

- Picture linearity

- Horizontal : 6% max.

- Vertical : 6% max.

- Geometric distortion

Any horizontal and vertical lines should be within the horizontal and vertical 3.0mm slits.

- Brightness

- * Max.brightness : 80 F/L(USA)
60 F/L(EUROPE)

- Contrast gain : 12dB min.

- Signal cable pin connection

- * Signal connector : 15 pin miniature "D" shell type.

- * Connection :

Pin 1 : no pin	Pin 9 : no Pin
----------------	----------------

Pin 2 : video signal	Pin 10 : no pin
----------------------	-----------------

Pin 3 : no pin	Pin 11 : no pin
----------------	-----------------

Pin 4 : no pin	Pin 12 : digital ground.
----------------	--------------------------

Pin 5 : self test	Pin 13 : H-sync.
-------------------	------------------

Pin 6 : no pin	Pin 14 : V-sync.
----------------	------------------

Pin 7 : video return	Pin 15 : no pin

Pin 8 : no pin	
----------------	--

3. Mechanical Characteristics

MODEL	Dimensions WxHxD[MM]	Weight [Kg]	Remarks
ML2671	309X251X307	7.5	W/STAND
ML4671	320X308.4X326	8.3	W/STAND

IMPORTANT SERVICE SAFETY INFORMATION

Service work should be performed only by qualified service technicians who are thoroughly familiar with all of the following safety checks and servicing guidelines:

WARNING

1. For continued safety, do not attempt to modify the circuit.
2. Disconnect the AC power before servicing.
3. Semiconductor heat sinks are potential shock hazards when the chassis is operating.

SERVICING THE HIGH VOLTAGE SYSTEM AND PICTURE TUBE

When servicing the high voltage system, remove the static charge by connecting a 10kohm resistor in series with an insulated wire(such as a test probe) between the chassis and the anode lead. (The AC line cord should be disconnected from the AC outlet.)

1. The picture tube in this display monitor employs integral implosion protection.
2. Replace with a tube of the same type and number for continued safety.
3. Do not lift the picture tube by the neck.
4. Handle the picture tube only when wearing shatter proof goggles and after discharging the high voltage anode completely.

X-RADIATION AND HIGH VOLTAGE LIMITS

1. Be sure all service personnel are aware of the procedures and instructions covering X-radiation. The only potential source of X-ray in a current solidstate display monitor is the tube. However, the picture tube does not emit measurable X-ray radiation if the high voltage is as specified in the "high voltage check" instruction.

It is only when high voltage is excessive that X-radiation is capable of penetrating the shell of the picture tube, including the lead in glass material. The important precaution is to keep

- the high voltage below the maximum level specified.
2. It is essential that serviceman have available at all times an accurate high voltage meter. The calibration of this meter should be checked periodically.
3. High voltage should always be kept at the rated value - no higher. Operation at high voltages may cause a failure of the picture tube or high voltage circuitry and, also under certain conditions, may produce radiation in excess of desirable levels.
4. When the high voltage regulator is operating properly there is no possibility of an X-radiation problem.
Everytime a color chassis is serviced, the brightness should be tested while monitoring the high voltage with a meter to be certain that the high voltage does not exceed the specified value and that it is regulating correctly.
5. Do not use a picture tube other than that specified or make unrecommended circuit modifications to the high voltage circuitry.
6. When troubleshooting taking test measurements on a display monitor with excessively high voltage, avoid being unnecessarily close to the display monitor. Do not operate the display monitor longer than is necessary to locate the cause of excessive voltage.

BEFORE RETURNING THE DISPLAY MONITOR

Fire and Shock Hazard

Before returning the display monitor to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that the leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the display monitor.

2. Inspect all protective devices such as non-metallic control knobs, insulating materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. To be sure that no shock hazard exists, checks for leakage current in the following manner:
 - Plug the AC line cord directly into a 120volt AC outlet. (Do not use an isolation transformer for this test)
 - Using two clips leads, connect 1.5 kohm, 10 watt resistor paralleled by a 1.5uF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to earth ground.
 - Use a SSVM or VOM with 1000 ohms per-volt or higher sensitivity to measure the AC voltage drop across the resistor. (See Figure 1.)
 - Connect the resistor to all exposed metal parts having a return path to the chassis (metal cabinet, screw heads, knobs and shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.
 - Any reading of 0.3volt RMS (this corresponds to 0.5milliamp.AC) or more is excessive and indicates a potential shock hazard which must be corrected before returning the display monitor to the user.

SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special characteristics often pass unnoticed and the protection afforded by them can not necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.

Replacement parts that have these special safety characteristics are identified in this manual, and its supplement electrical components having such features are identified by a ! in the Parts List and Schematic Diagrams.

Before replacing any of these components, read the Parts List in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the Parts List may create shock, fire, or other hazards.

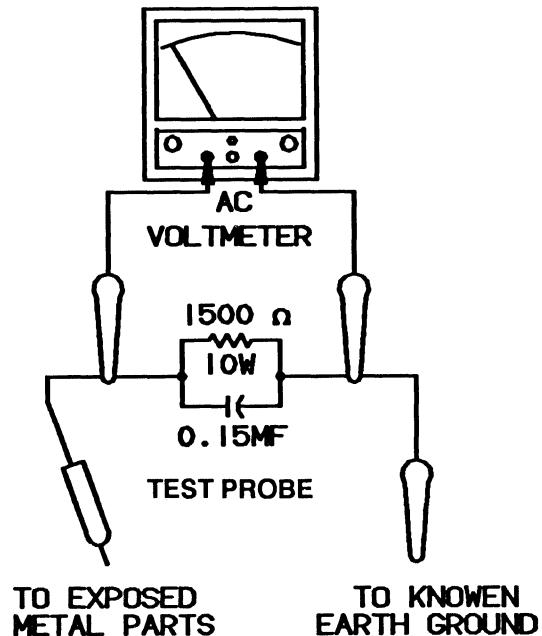

Figure 1. Leakage Current Test Circuit

THEORY OF OPERATION

GENERAL

This is a high-resolution monochrome display monitor, using a paper-white phosphored CRT with etched faceplate.

It uses one video signal input and separated sync signals.

It can operate in all of the VGA modes.

DESCRIPTION

1. Main Board

1-1. Power Supply

This is a constant-frequency switch-mode power supply using L4960 monolithic integrated circuit. The output voltage regulation is achieved by means of a variable duty cycle. The output voltage of this power supply is fed back into the pin 2 of L4960. This voltage is compared to reference voltage internally. The difference of these voltages control the duty cycle of output current. D401 to D404, and C404 to C405 from input DC supplier. C408, C409, R404 are the components for frequency compensation, R403, C406 are for oscillation of sawtooth wave. C407 is for soft start of this circuit. D405 is a flywheel diode for continuous flowing current. Output voltage is varied by adjusting VR401 potentiometer.

1-2. Horizontal processor IC302

IC302 performs following functions.

- Horizontal oscillator
- Phase-locked loop for frequency and phase comparison.
- Phase-locked loop to compensate various delay times of the horizontal output transistor.

The sync signal from Q303 is fed into pin 3 of IC302 and flyback pulse into pin 4. These two signals are compared and the circuit is locked to a correct frequency and phase.

1-3. Horizontal output stage Q305

Q305 is a horizontal output switch which is closed during the scan period and opened during the flyback. It sinks a driver signal from IC302 through Q304. The flyback period is determined by the resonance of C316 and deflection yoke. C316 makes the necessary S-correction.

Because of the losses in the deflection yoke, a linearity correction is required. This is achieved by L302.

The horizontal screen size can be varied by adjusting L303. The high voltage of 12.5KV for CRT anode is also generated in the flyback transformer by use of the flyback pulse.

1-4. Vertical processor IC 201

IC201 performs following functions.

- Vertical oscillator
- Ramp generator
- Linearity control
- Output amplifier

There are three vertical size controls : VR202, VR203, and VR204. VR202 is for mode 3, VR203 for mode 2, and VR204 for mode 1. Each mode is automatically selected by IC301.

1-5. Dynamic Focus

Q501 is used to provide dynamic focus voltage which is added to G4 voltage of the CRT. This voltage is needed to change G4 voltage according to the angle of the beam.

2. CRT Board

IC101(M51392P) contains wide bandwidth video amplifier, gain control, pedestal clamp and brightness control circuit. Q103 and Q104 form a cascade video amplifier circuit of which its output is applied to the cathode pin of the CRT.

3. Line Filter Board

This board contains fuse and EMI filter components.

IMPORTANT :

When replacing the power supply, make sure that the black ground wire is properly attached to the main chassis frame. When replacing the fuse, make sure that the fuse is of the same type and rating as the original.

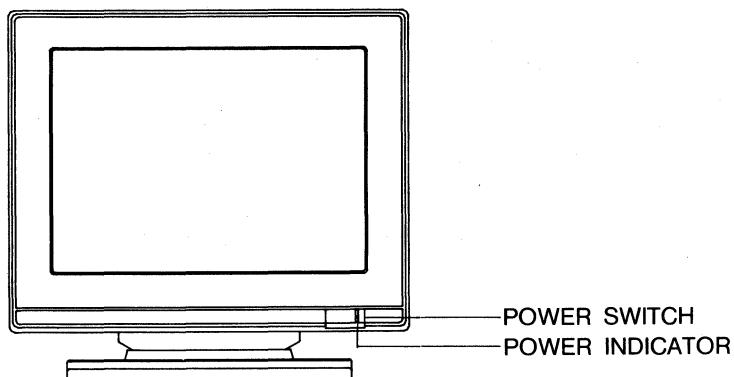

***NOTE :**

The adjustment requires the connection of a personal computer to the monitor. Although the monitor is adjusted before it is delivered, readjustment may be required when the setting position is changed or when a component is replaced.

MAJOR OPERATING COMPONENTS

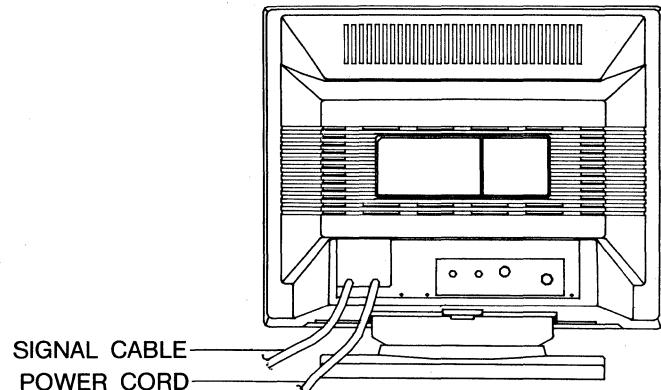

ML2671

1. FRONT VIEW

- 1) Power Switch : Push the power switch to turn the unit ON.

2. REAR VIEW

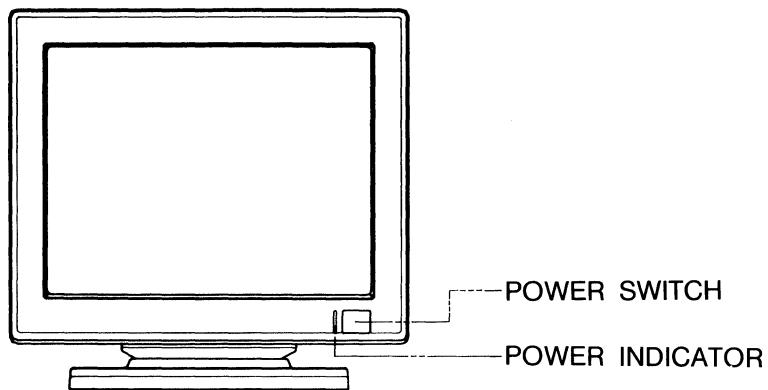

- 2) Power Indicator : When the monitor is on, the power indicator(Green) will light go on.
3) Brightness Control : Turning this control adjusts the overall brightness.
4) Contrast Control : Turning this control adjusts this display contrast.
5) Signal Cable : Connector to the terminal of CPU.
6) Power Cord : Connect with specified outlet

MAJOR OPERATING COMPONENTS

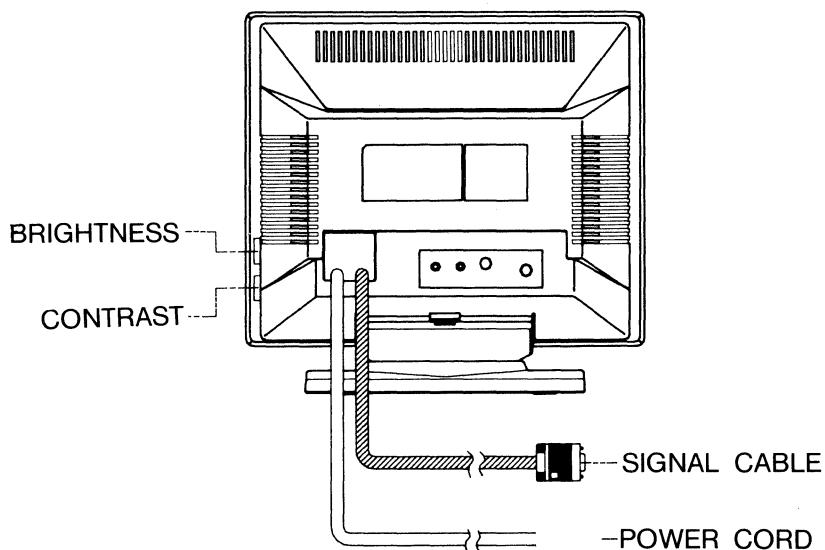

ML4671

1. FRONT VIEW

- 1) Power Switch : Push the power switch to turn the unit ON.

2. REAR VIEW

- 2) Power Indicator : When the monitor is on, the power indicator(Green) will light go on.
3) Brightness Control : Turning this control adjusts the overall brightness.
4) Contrast Control : Turning this control adjusts this display contrast.
5) Signal Cable : Connector to the terminal of CPU.
6) Power Cord : Connect with specified outlet

DISASSEMBLY INSTRUCTIONS

1. Fig. A (CABINET)

Loosen two screws (A) holding Cover-Rear and Cover-Front, and the screw (B) in order to release the Cover-Rear from the Chassis-Frame, and the screw (C) in order to release Cover-Rear from the Back-Holder, Cord.

Remove the Cover-Rear by pulling Cover-Rear backward while pushing the inner latches in direction of (E), using two jigs(D).

2. Fig. B (PWB's)

- 1) The CRT must be discharged firstly. Refer to the high voltage discharge procedure for important safety precautions.
- 2) Remove the CRT's anode cap(a) from the CRT.
- 3) Disconnect the ground lead and remove the PWB-CRT

from the Chassis-Frame.

- 4) Remove Chassis-Frame from the Cover-Front by loosening screws (b).
- 5) Loosen two screws (c) holding the Chassis-frame and Back-Holder, Cord.
- 6) Loosen five screws (d) from the Chassis-Frame and remove PWB-Main.
- 7) Loosen two screws (e) from the Chassis-Frame and remove PWB-Power.
- 8) Loosen four screws (f) to remove Trans-Power from the Chassis-Frame.
- 9) Remove the lug-terminal from the Chassis-Frame by unscrewing (g).

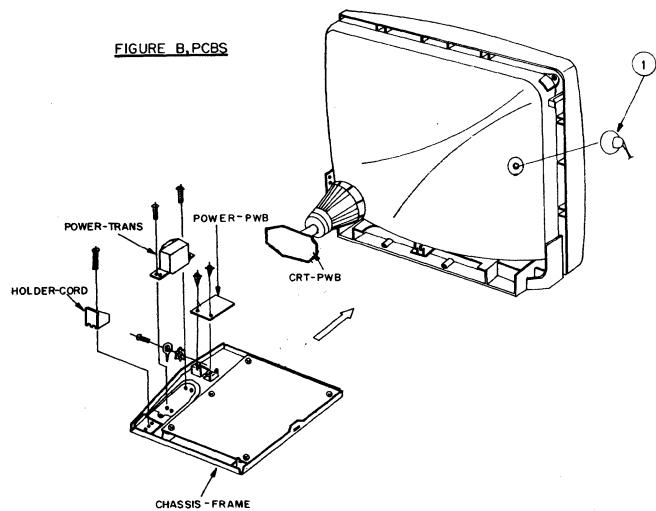

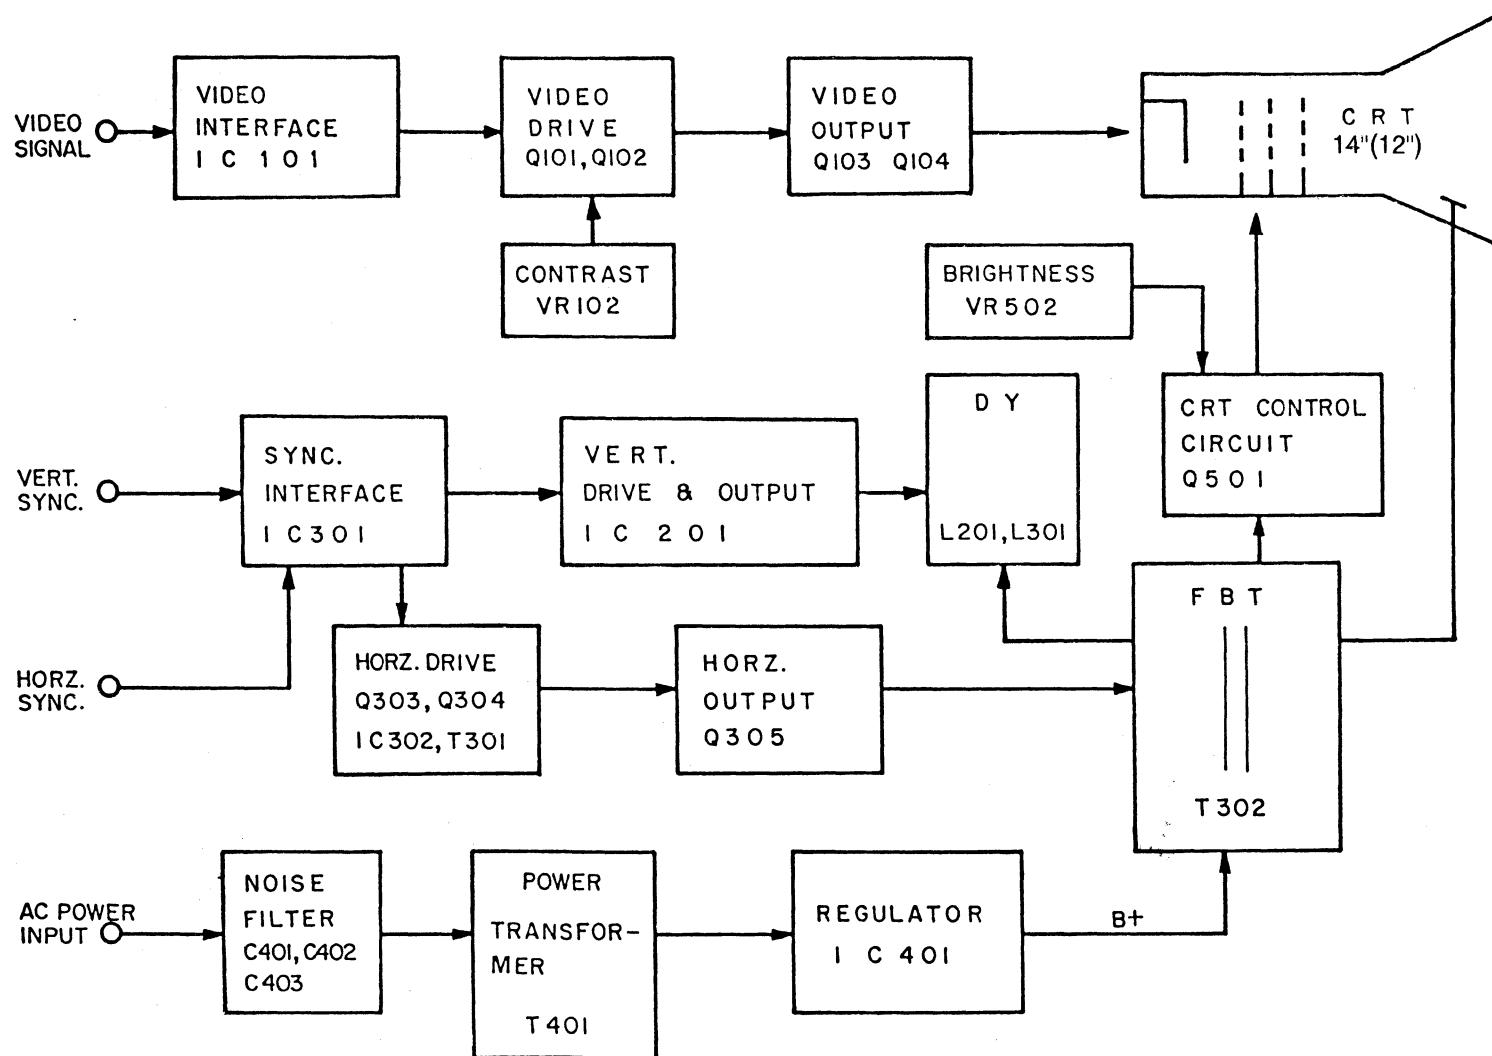

FIG 2

BLOCK DIAGRAM

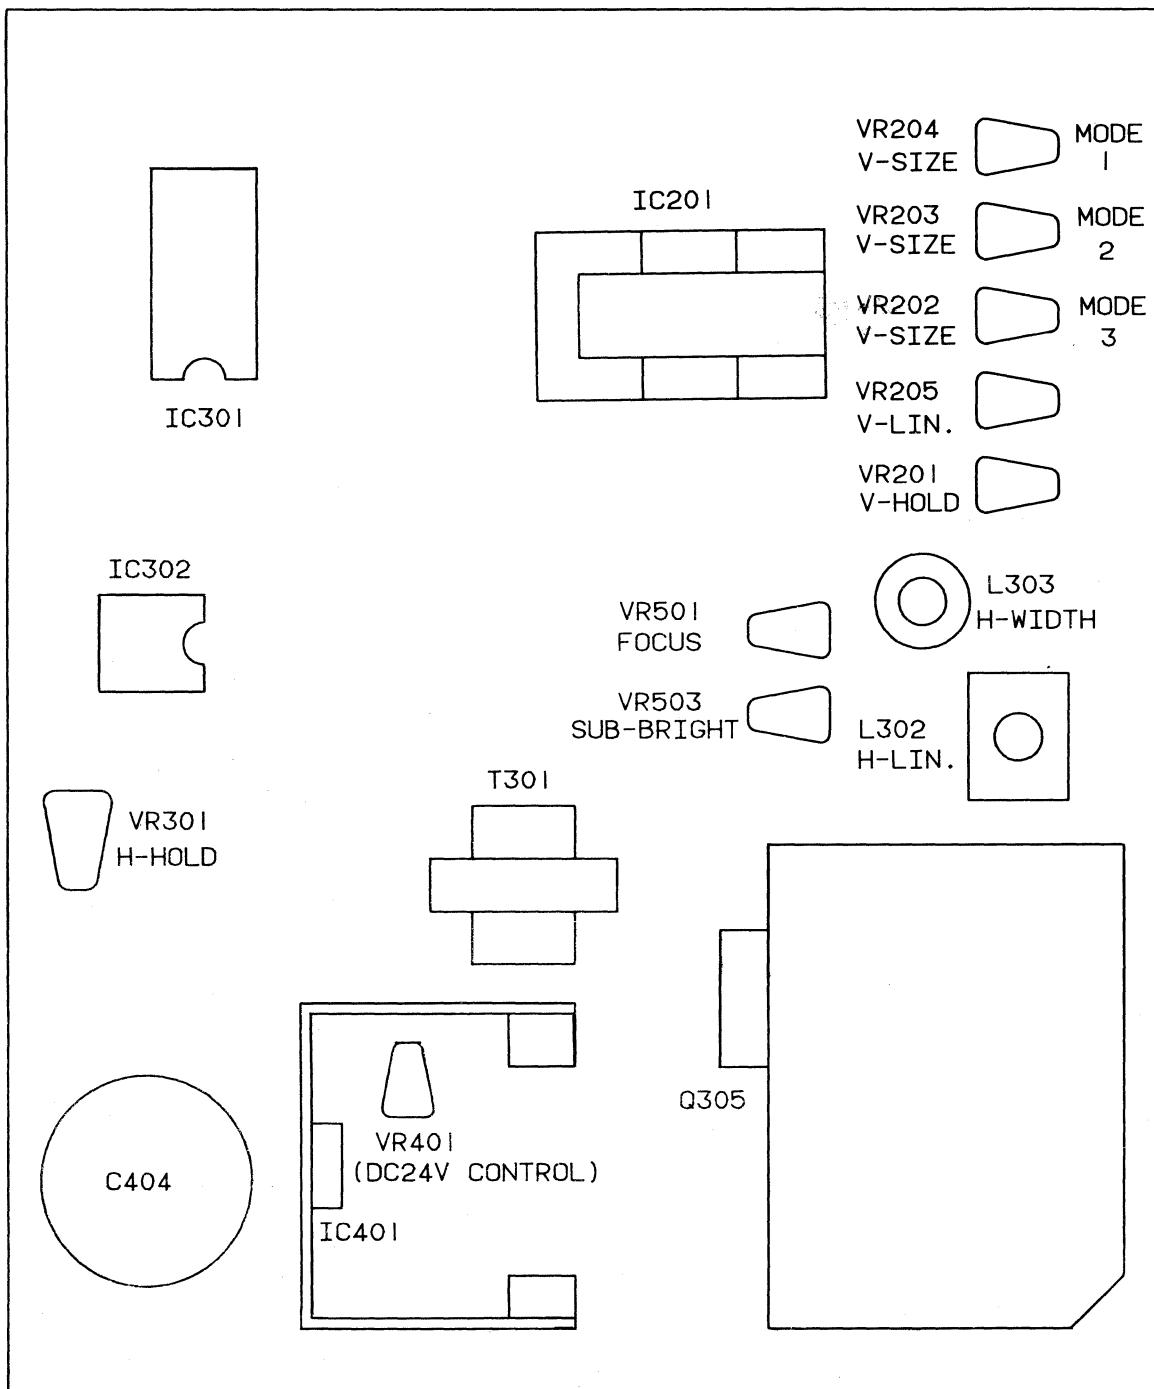

ADJUSTMENT METHOD

SEQUENCE	ITEM	ADJUSTED BY	GOAL	ADJ.CONDITION	REMARKS
1	B+(FBT SUPPLY VOLTAGE)	VR401 (V-ADJST)	+24± 0.2V		
2	H - HOLD	VR301 (H-HOLD)	Adjust screen at horizontal center position of raster.		
3	H-LINEARITY	L302 (H-LIN)	A same character size of horizontal axis.	FULL CROSS HATCH PATTERN or FULL "H" PATTERN.	
4	H-WIDTH	L303	Refer to the page 4.	(MODE3) Set FULL WHITE PATTERN and brightness 30F/L. Next, change to CROSS HATCH PATTERN	
5	V-HOLD	VR201	Vertical free running Frequency: 54±2(Hz).	No signal.	
6	V-LINEARITY	VR205	A same character size of Vertical axis	FULL CROSS-HATCH PATTERN or FULL "H" PATTERN	
7	V-SIZE	1)VR202 (V-SIZE1) 2)VR203 (V-SIZE2) 3)VR204 (V-SIZE3)	Refer to the page 4. (MODE3) A same sequence 7-1.(MODE2) A same sequence 7-1.(MODE1)	A same condition as the adjustment method sequence #4.	
8	CENTERING	CENTERING MAGNET OF DEFLECTION YOKE	Adjust screen at central point.		
9	TILT	DEFLECTION YOKE	Turn the DY in order to adjust within ±1 deg of tilt.		
10	GEOMETRIC	G/D COMPENSATION MAGNET	Adjust G/D by magnet in order to enter within overlay jig.		
11	BRIGHTNESS	VR503 (SUB-BRT.)	Adjust VR503 in order to instantly disappear the back-raster.	Center = position (detent) of VR502 (EXT-BRT.)	
12	CONTRAST	VR101 (SUB-CONT.)	Adjust VR101 in order to make brightness to 40±5F/L.	Set FULL WHITE PATTERN(MODE3). Next, set VR102 (CONTRAST) to max.	
13	FOCUS	VR501	Adjust VR501 in (FOCUS)	FULL "H" PATTERN order to make the total focus of the screen to optimal status.	

ALIGNMENT INSTRUCTIONS

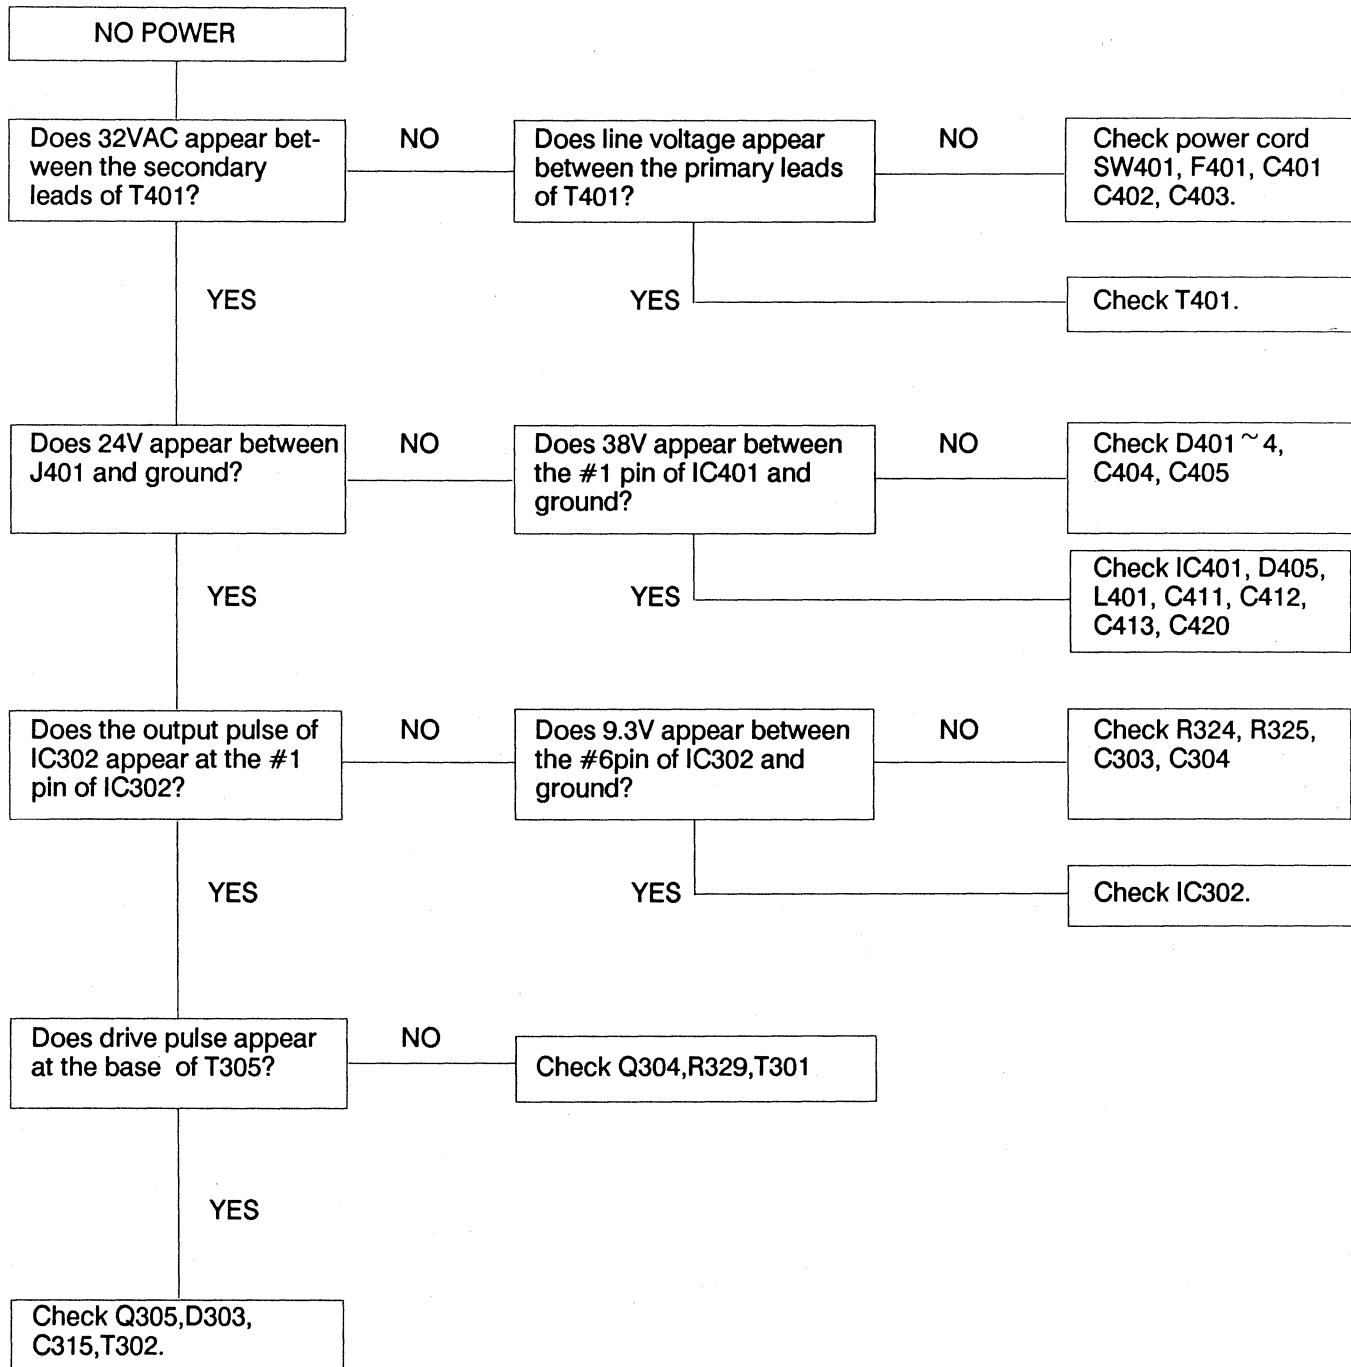

Alignment Parts and Locations

TROUBLE SHOOTING

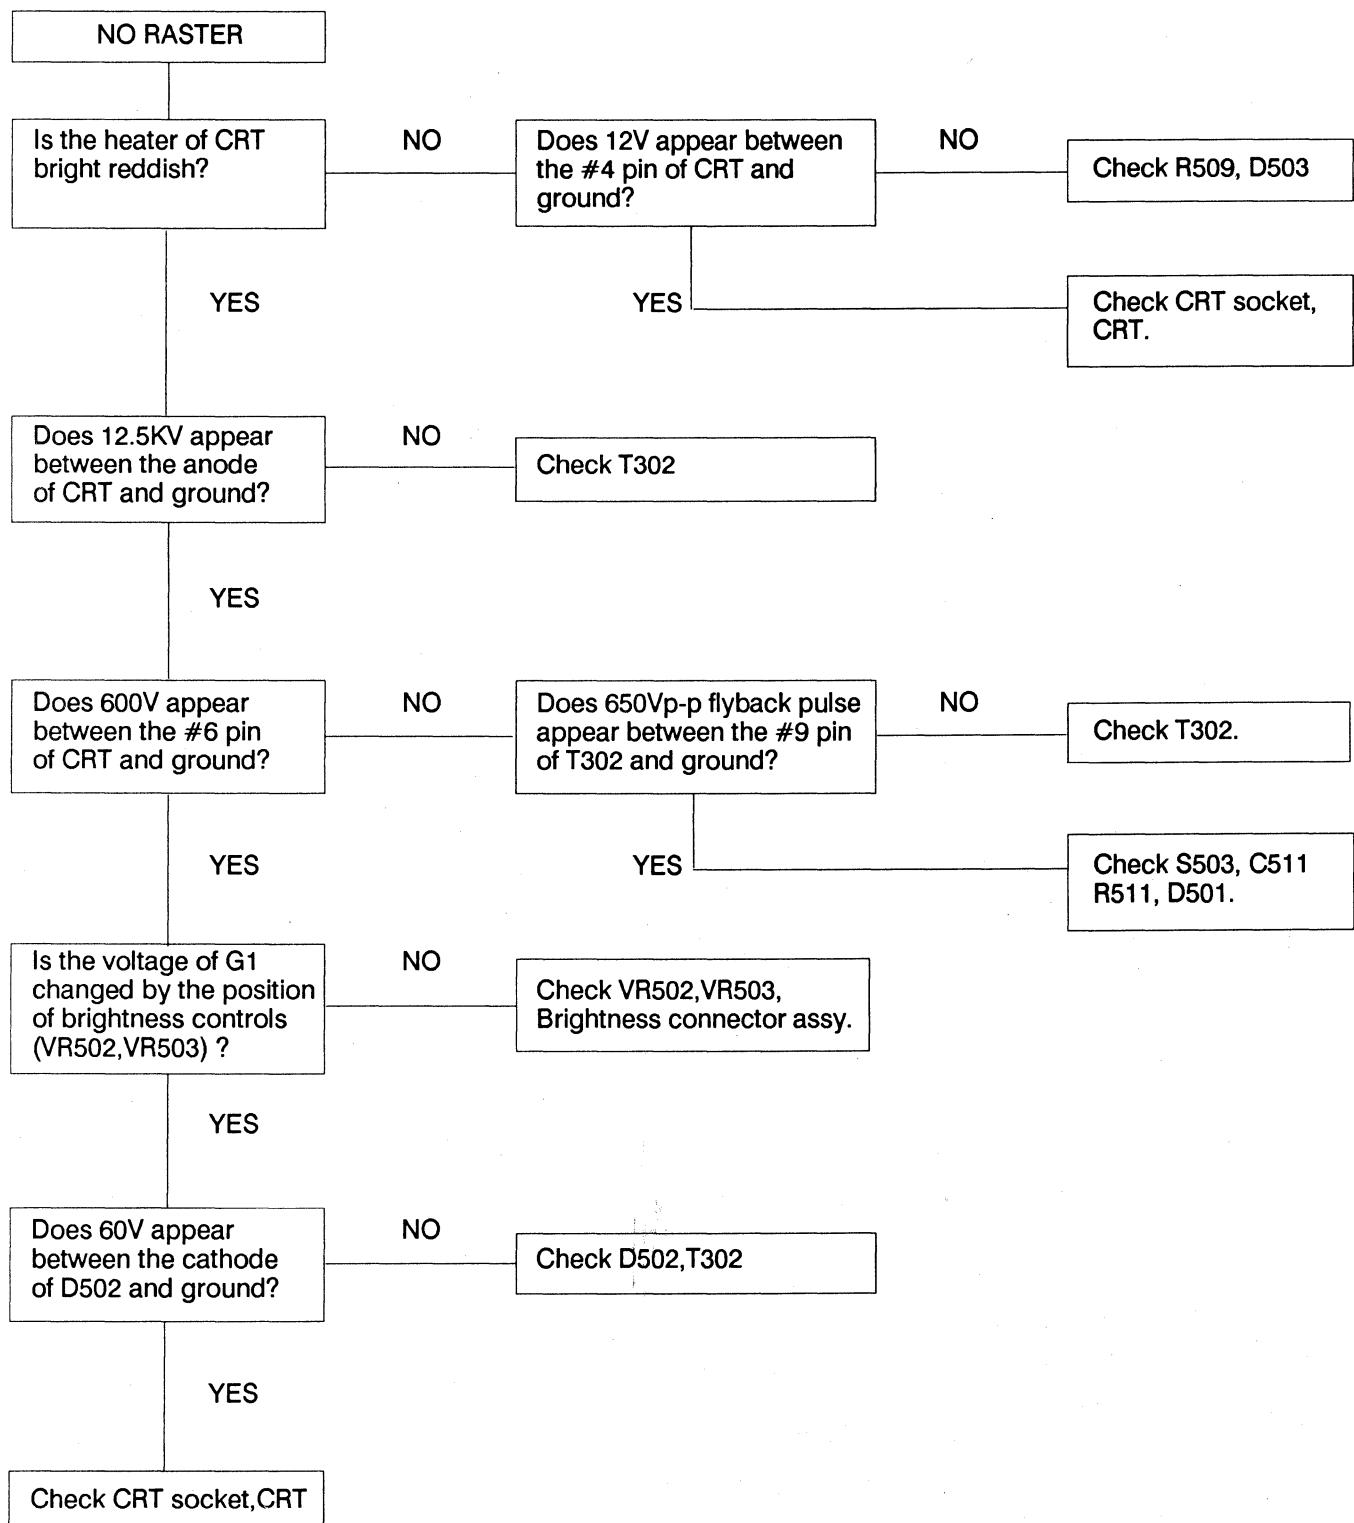

1. NO POWER

No raster appears and power indicator is not ON in spite of supplying rated AC power input.

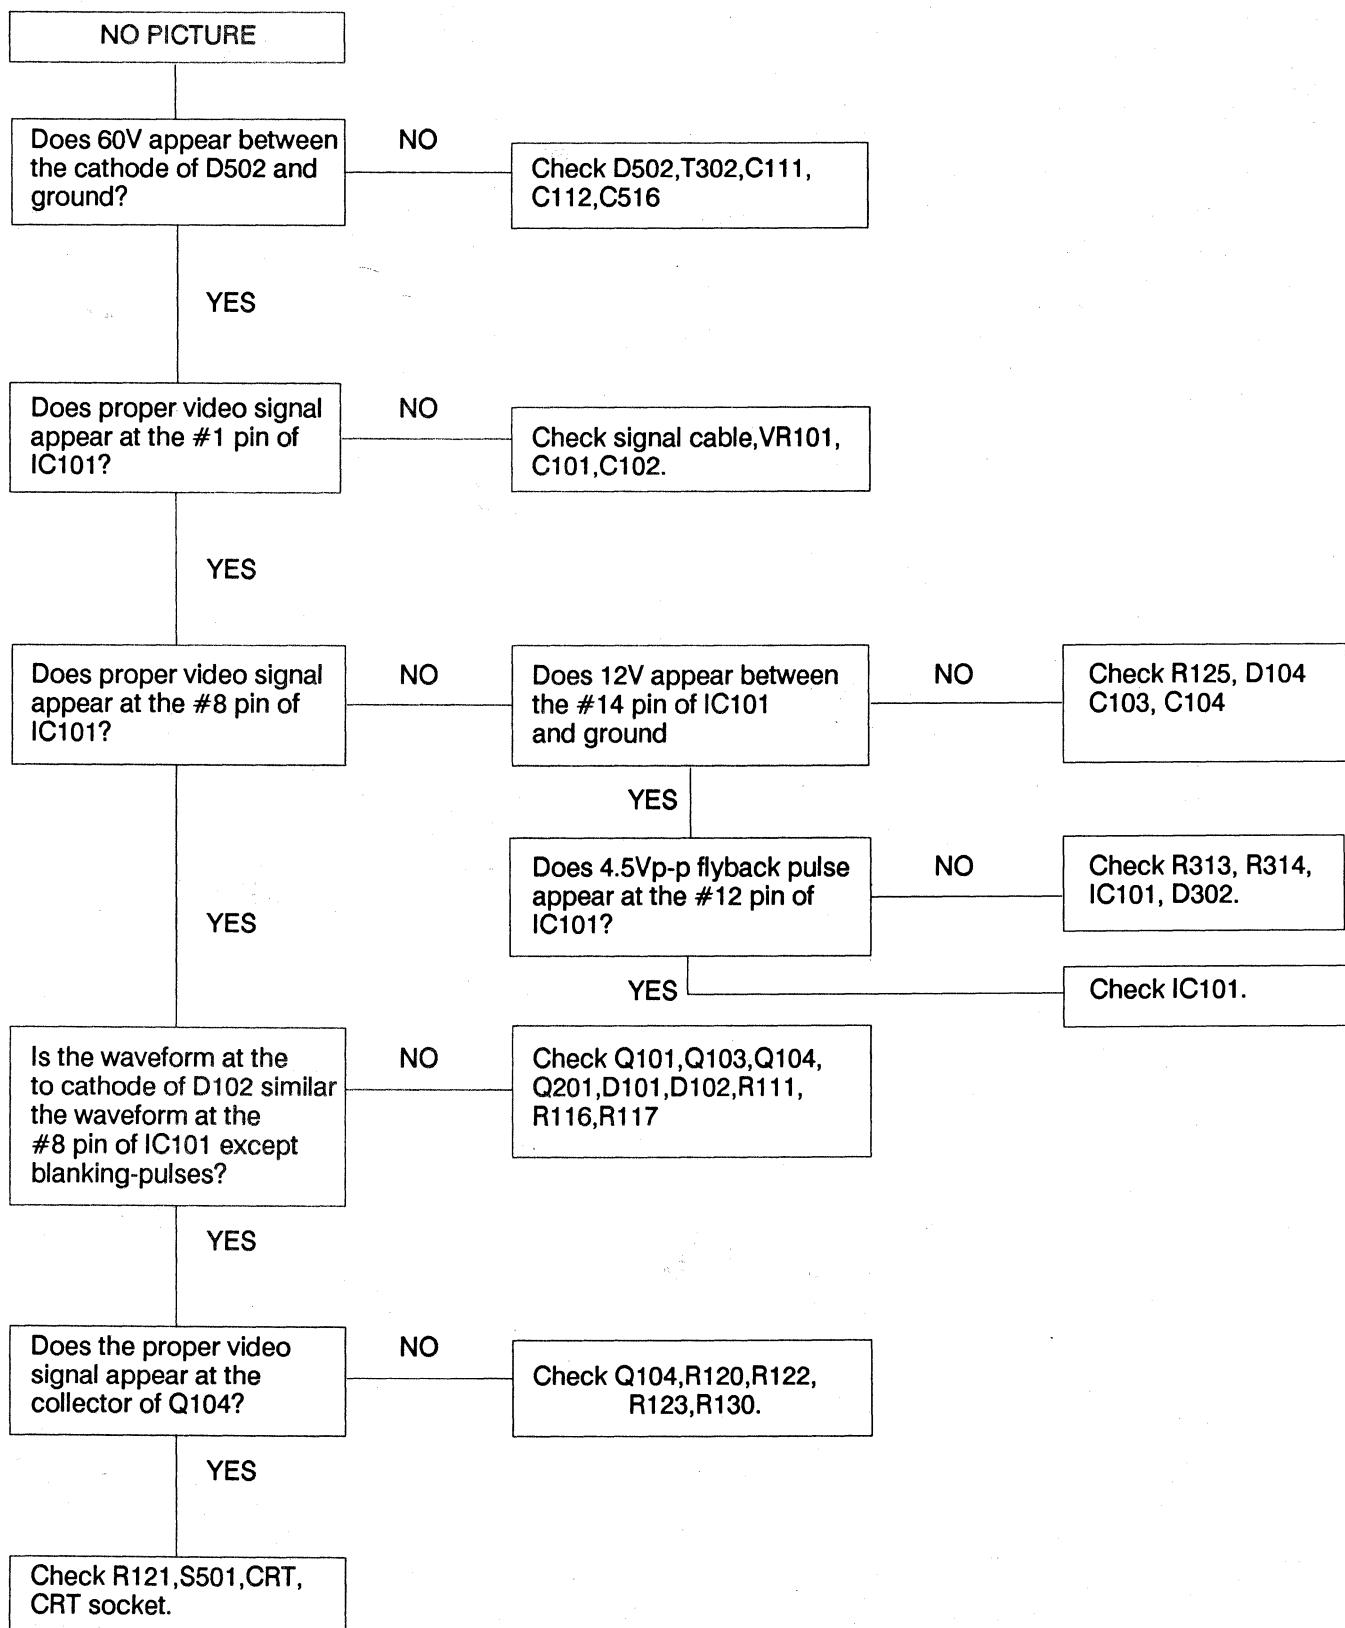

2. NO RASTER

Power supply and horizontal circuits operate normally, but there is no raster.

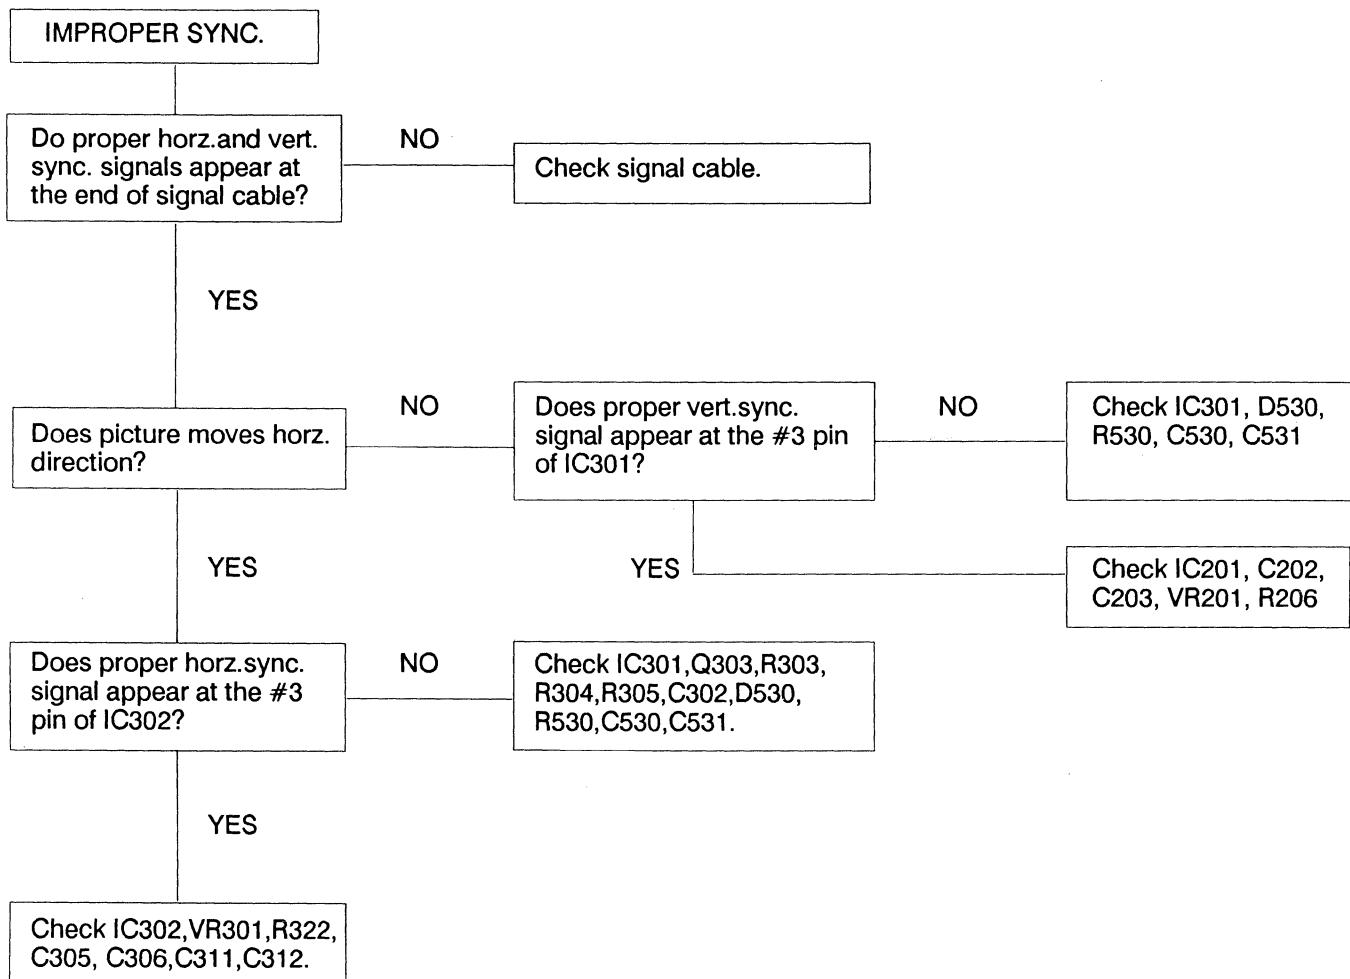

3. NO PICTURE

No picture on screen video signal source is properly connected.

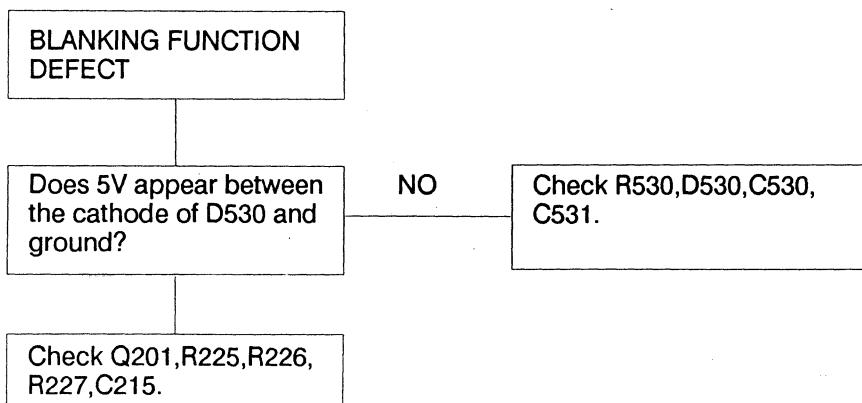

4. IMPROPER HORIZONTAL OR VERTICAL SYNCHRONIZATION

There is no stable. It moves horizontal or vertical direction.

5. BLANKING FUNCTION DEFECT.

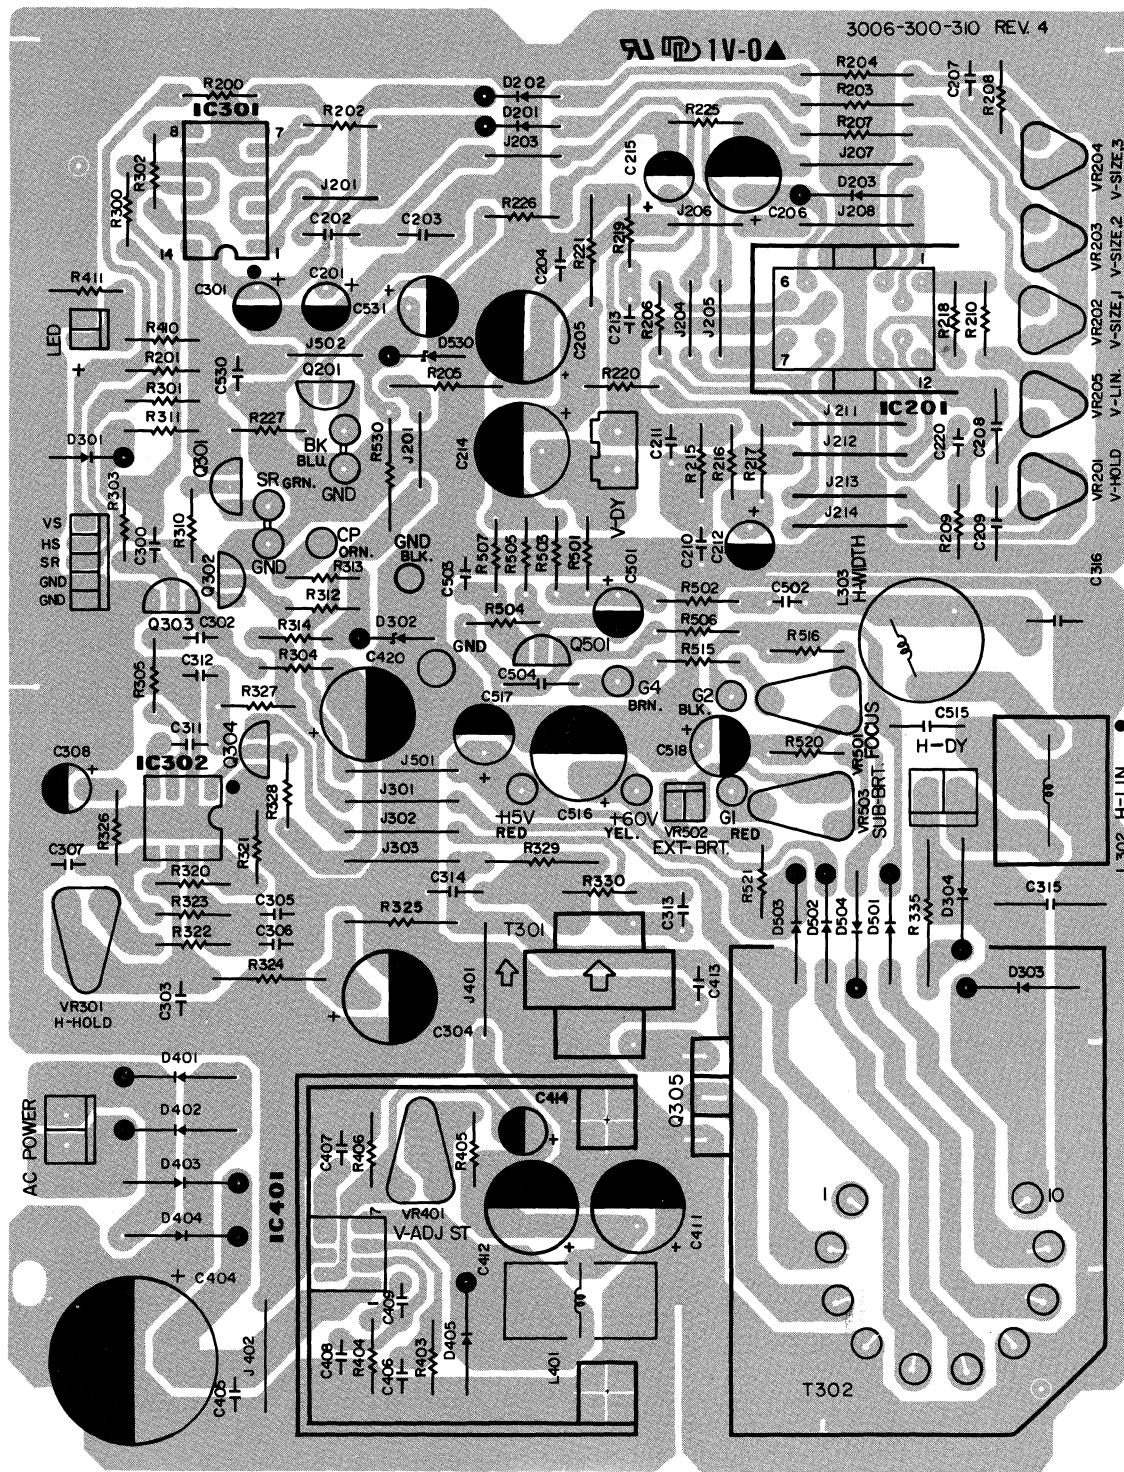

Vertical retrace line appears on the screen when the external brightness control(VR502) is set to the high range.

REPLACEMENT PARTS LIST

PRODUCT SAFETY SHOULD BE CONSIDERED WHEN A COMPONENT REPLACEMENT IS MADE IN ANY AREA OF THIS UNIT WITH A COMPONENT INDICATED BY A SAFETY-CRITICAL MARK.

THIS PARTS LIST AND THE SCHEMATIC DIAGRAM SHOW COMPONENTS WHOSE VALUE HAVE SPECIAL SIGNIFICANCE TO PRODUCT SAFETY. IT IS PARTICULARLY RECOMMENDED THAT ONLY PARTS SPECIFIED ON THE FOLLOWING PARTS LIST BE USED FOR COMPONENT REPLACEMENT POINTED OUT BY THE SAFETY CRITICAL MARK.

■ SEMICONDUCTOR IDENTIFICATION

WAVEFORMS

Waveform Measurement Conditions :

1. The voltage level and waveform at each point are given below on the rated input power when this set is connected to a personal computer with a video signal input at a white pattern with contrast max.
2. → indicates the waveform check points. (In the chart, waveforms are measured from the point indicated to chassis ground.)

SCHEMATIC DIAGRAM

MODEL NO: ML4671(ML2671)

CHASSIS NO: GSI-1

WARNING: THIS MONITOR CONTAINS SAFETY CRITICAL COMPONENTS ALL PARTS SHOWN IN THE SHADED AREAS OF THE SCHEMATIC ARE SAFETY CRITICAL. FOR CONTINUED SAFETY REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMMENDED PARTS.
REFER TO PARTS LIST FOR EXACT REPLACEMENTS.

Avertissement: CE RECEPTEUR EST EQUIPE DE COMPOSANTS CRITIQUES POUR LA SECURITE TOUTES LES PIECES INDIQUEES DANS LES ZONES OMBREES DU SCHEMA SONT CRITIQUES POUR LA SECURITE POUR MAINTENIR LE DEGRÉ DE SECURITE DE L'APPAREIL NE REPLACER LES COMPOSANTS DONT LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DES PIECES RECOMMANDÉES PAR LE FABRICANT.
CONSULTER LA NOMENCLATURE DES PIECES POUR TROUVER LES PIECES DE RECHANGE EXACTES.

* NOTE

1. RESISTANCE IS SHOW IN OHM, K=1,000 M=1,000,000.

2. RATED POWER OF RESISTOR NOT NOTED IN SCHEMATIC DIAGRAM IS 1/4W.

3. CAPACITANCE IS SHOWN IN UF, P=PUF (PICO FARAD).

4. RATED VOLTAGE OF CAPACITOR NOT NOTED IN SCHEMATIC DIAGRAM IS 50V.

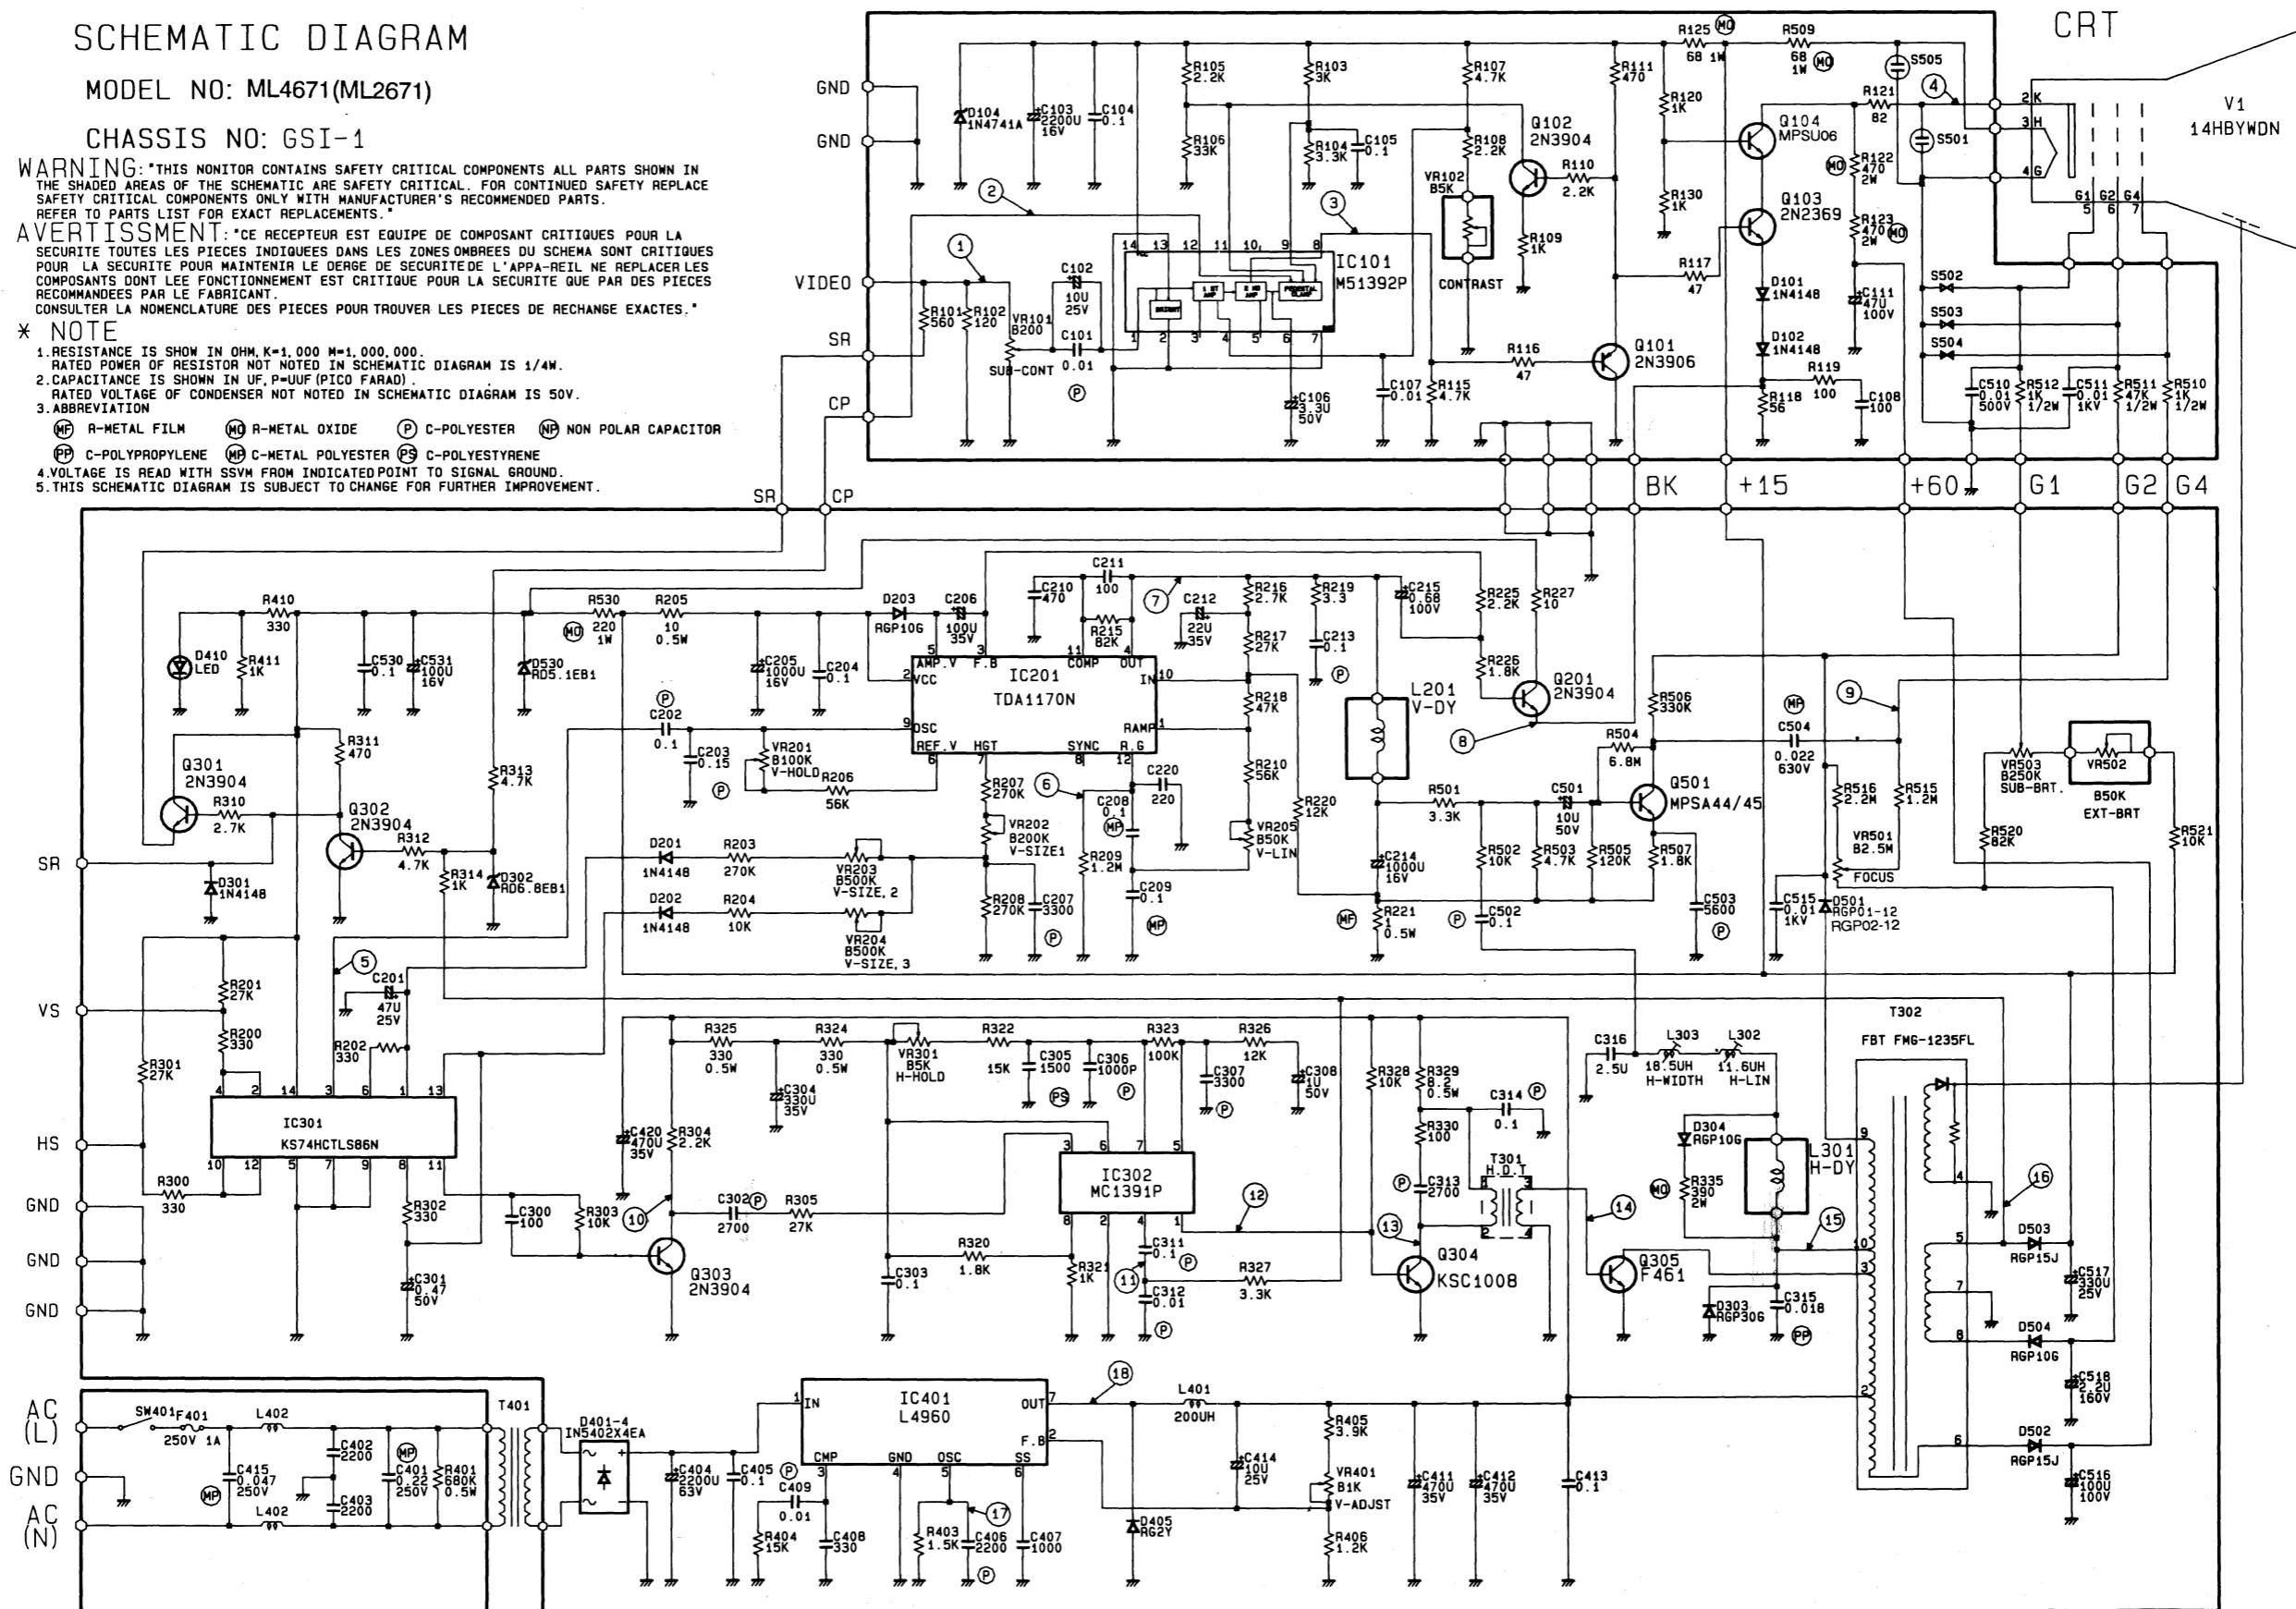

5. ABBREVIATION

MF R-METAL FILM MO R-METAL OXIDE P C-POLYESTER NP NON POLAR CAPACITOR

PP C-POLYPROPYLENE MP C-METAL POLYESTER PS C-POLYSTYRENE

4. VOLTAGE IS READ WITH SSVM FROM INDICATED POINT TO SIGNAL GROUND.

5. THIS SCHEMATIC DIAGRAM IS SUBJECT TO CHANGE FOR FURTHER IMPROVEMENT.

CIRCUIT DIAGRAM DISPLAY SYMBOLS

RMS MEASUREMENT RESULTS OF THE IC'S

Memo

1. Resistor

- Resistance value

When no unit is provided : [Ω]

K : [K- Ω]

M : [M- Ω]

- Rated permissible power capacity

When no display is mode : 1/4[W]

Others : Display are provided

- Resistor type

Under than 1/2[W] : Carbon resistor

Over than 1[W] : Oxidized metal film resistor

2. Capacitor

- Capacitance

When no unit is provided:

1) Electrolytic - [μF]

2) E.T.C - [pF]

Others: Display are provided

- Withstand voltage

No display :

1) Polyester - DC 100[V]

2) E.T.C - DC 50[V]

Others : DC withstand voltage[V]

AC display : AC withstand voltage[V]

- Capacitor type

No type display : Ceramic and electrolytic capacitor

P : Polyester capacitor

MP : Metallized polyester capacitor

PS : Polystyrene capacitor

Measured with high impedance V.T.V.M. or circuit tester under the rated line voltage. Voltage reading may vary $\pm 10\%$. Video signal is a white pattern and mode 3.

Unit: Volts
